

# Behind the scene: How simplified regimen help asthma patients relieve their symptoms and reduce reliever use

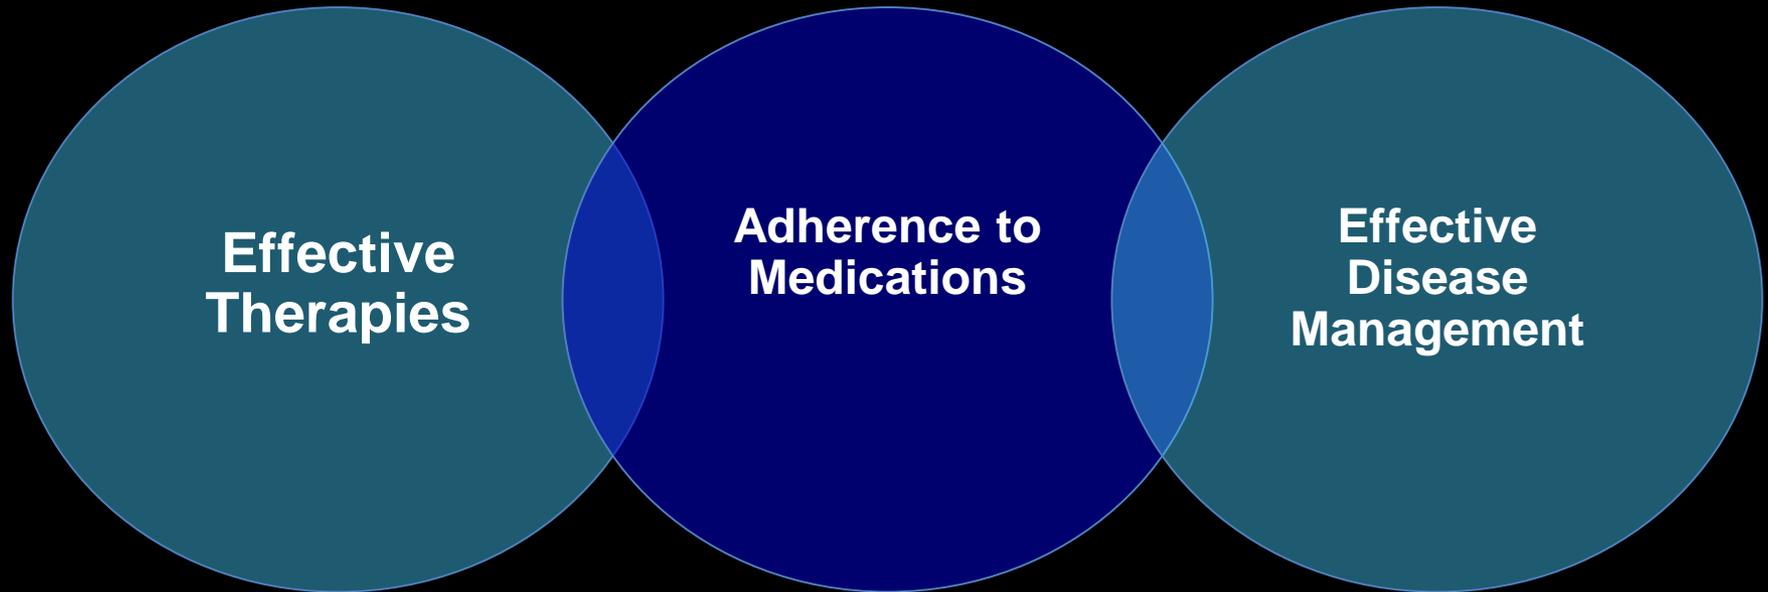

郭炳宏

臺大醫院內科部

# Disclaimer

- **This event is sponsored by GSK, in the interest of advancing the scientific knowledge of healthcare professionals.**
- **GSK does not approve of or recommend the use of medicines in any way other than that stated in the approved package inserts.**
- **For full prescribing information, refer to the package inserts approved by TFDA**

# Adherence: Key to Therapeutic Success

**“Drugs don’t work in patients who do not take them.”**

**C. Everett Koop, former US Surgeon General**

# Non-adherence

- **Non-adherence:** described when a patient misses his dose more than 30% of the days in a month.

Indian J Psychol Med. 2012 Apr-Jun; 34(2): 107–109.

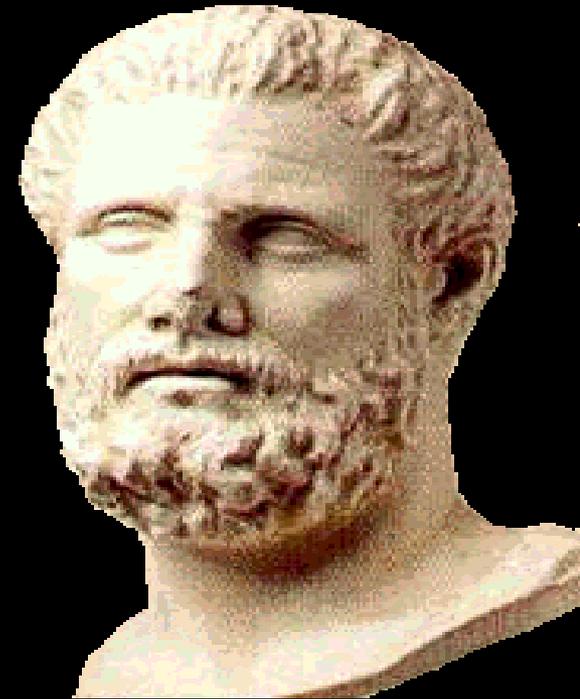

# Non-Adherence: Not A New Issue !

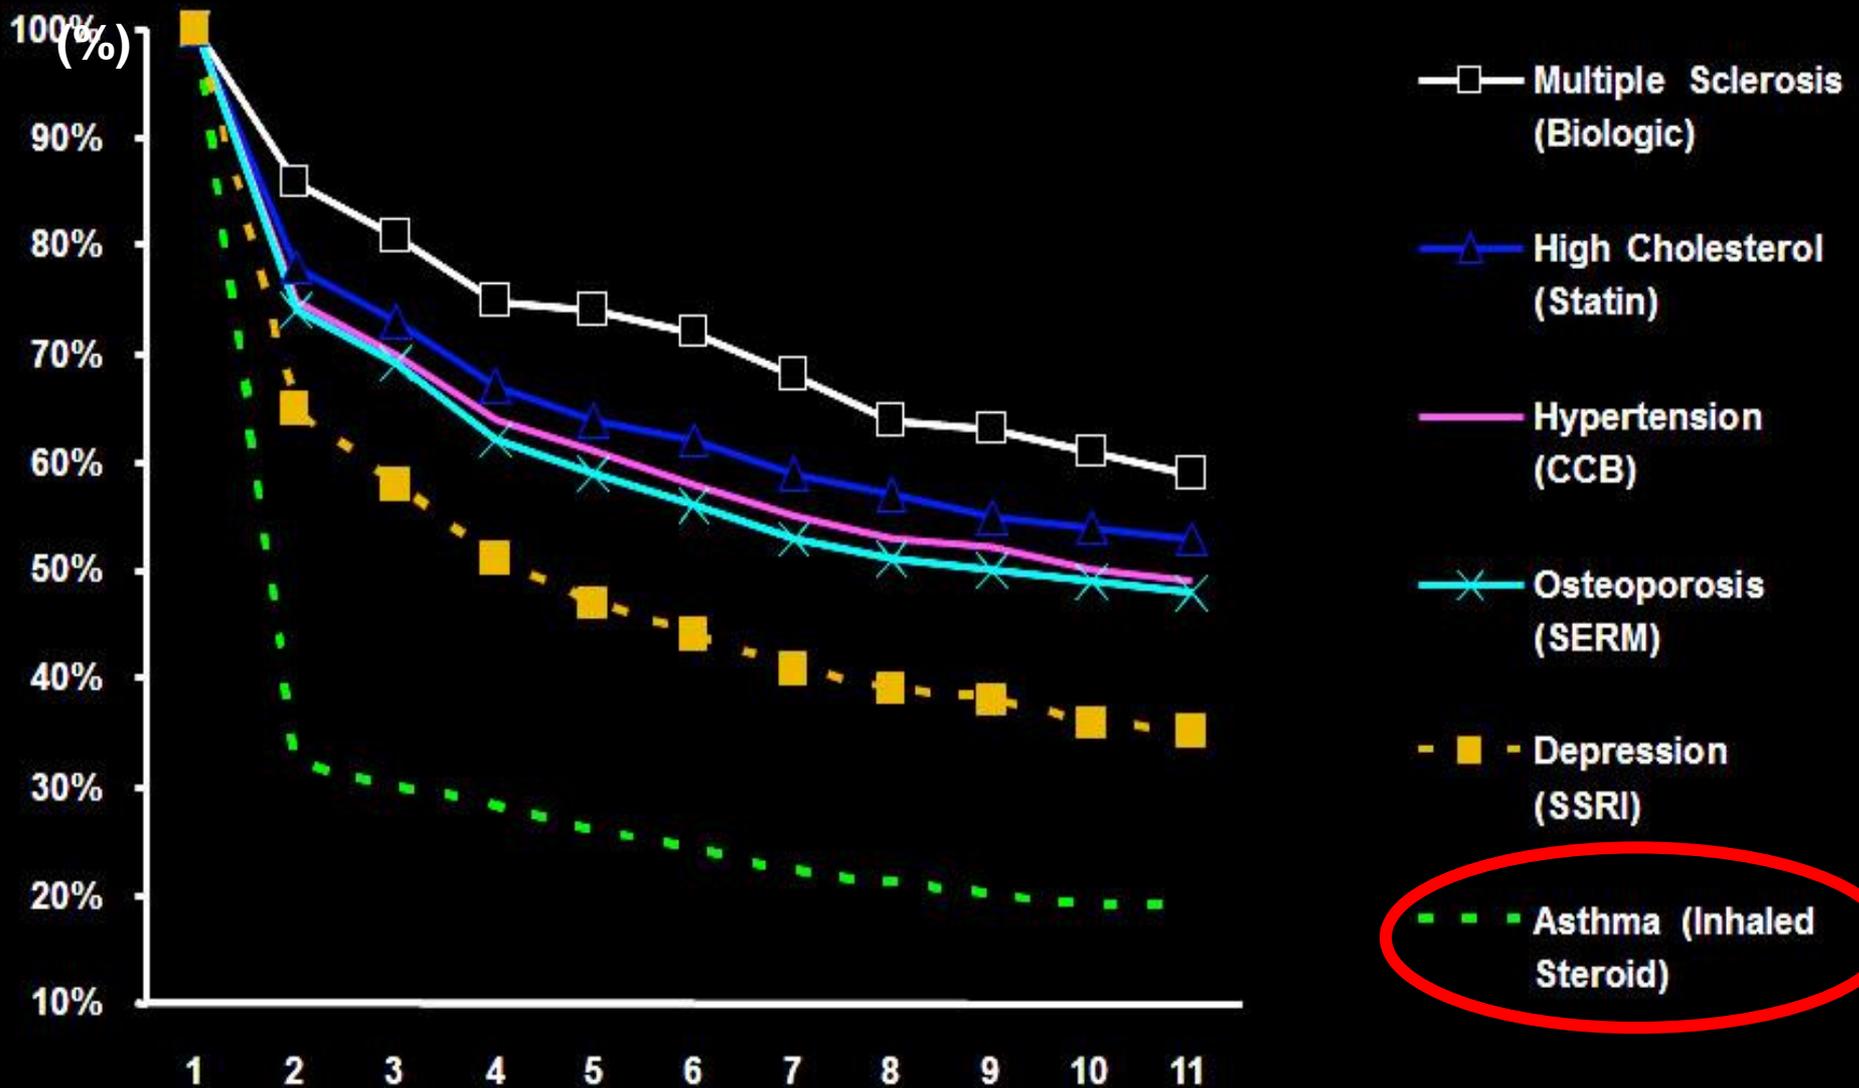

“ Physicians should keep aware of the fact that patients often lie when they state that they have taken certain medicines ”

-

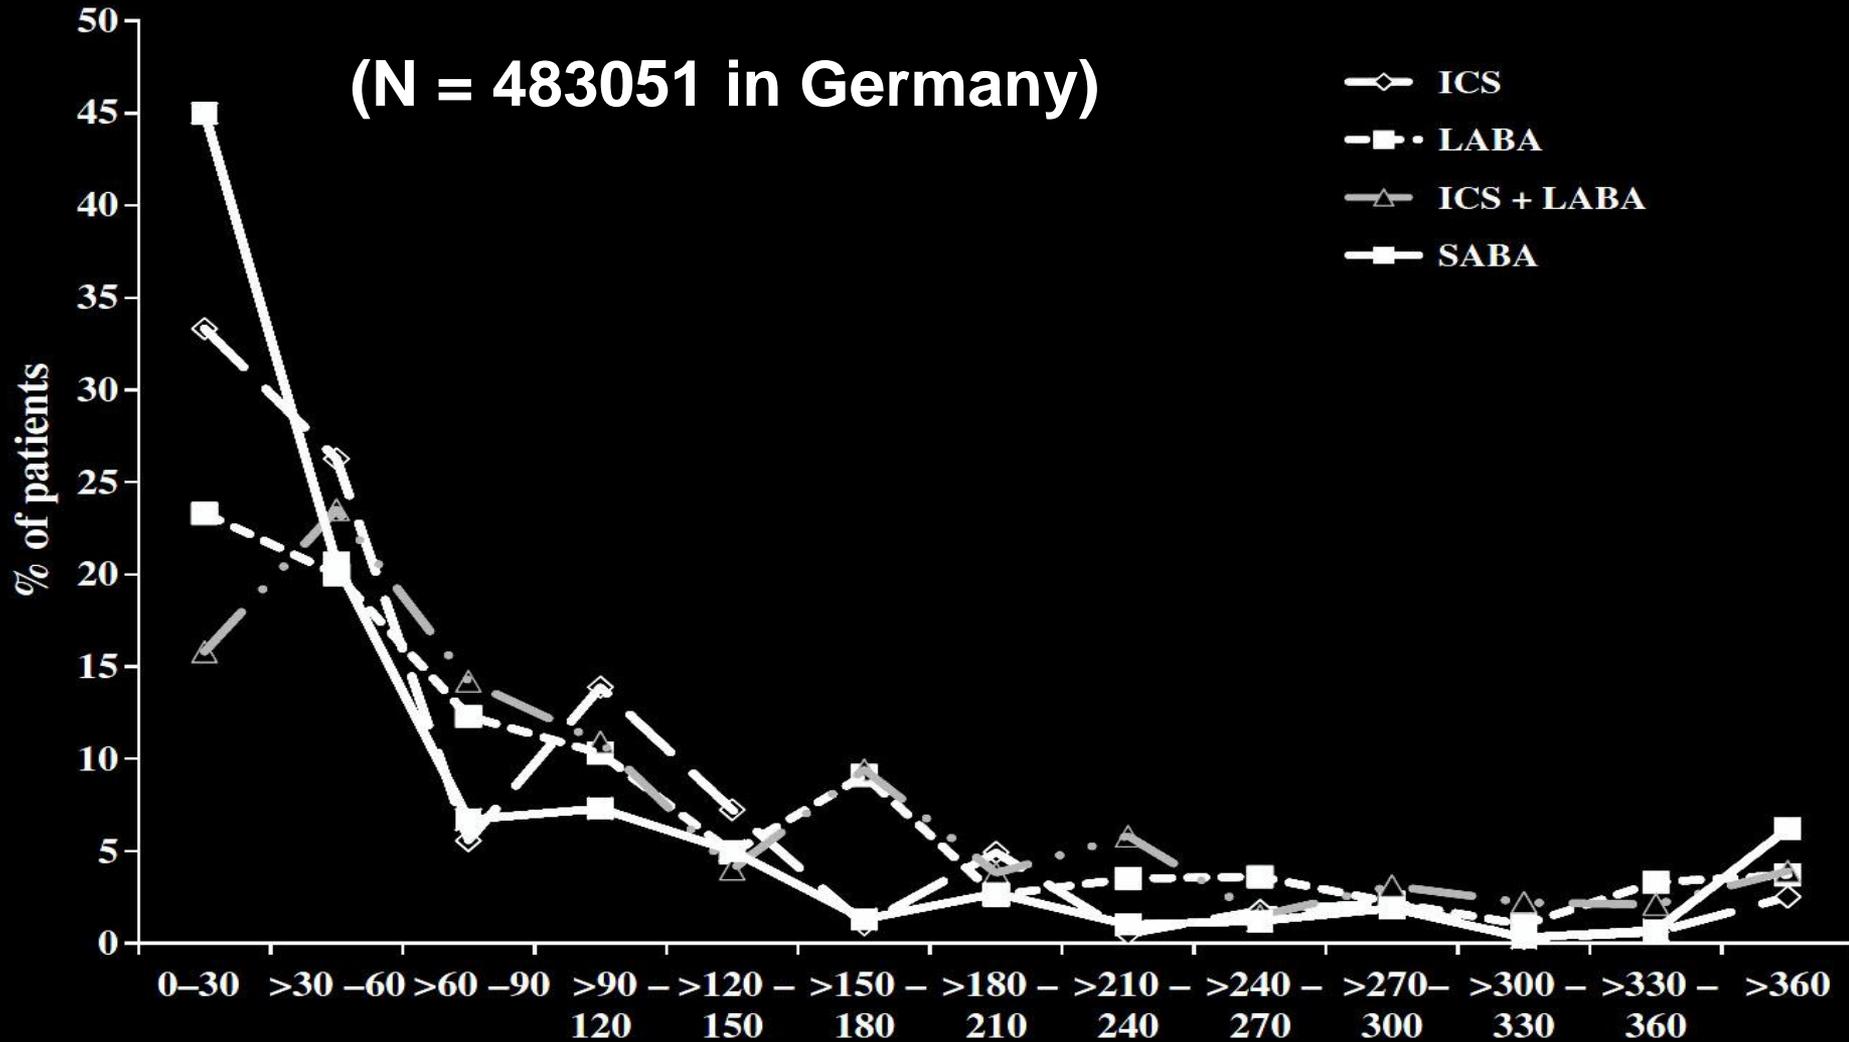

Hippocrates

# Patient persistence on medications

# % of patients receiving the indicated asthma inhalers over 1 year

# Attitudes, symptoms and adherence

91%

were confident in  
managing their asthma

43%

used rescue medication  $\geq$   
3 times in past 7 days<sup>c</sup>

24%

Needed A&E treatment  
for asthma in previous  
12 months<sup>d</sup>

48%

take their ICS  
every day

44%

Required oral steroids  
for asthma in previous  
12 months<sup>e</sup>

Base: all respondents from the country-specific analysis, N = 7457; A&E, accident and emergency

<sup>a</sup>Q: Which of the following most closely describes your level of confidence in managing your asthma? A: very/fairly confident (combined)

<sup>b</sup>Q: Which statement best describes how you take your regular asthma treatment?

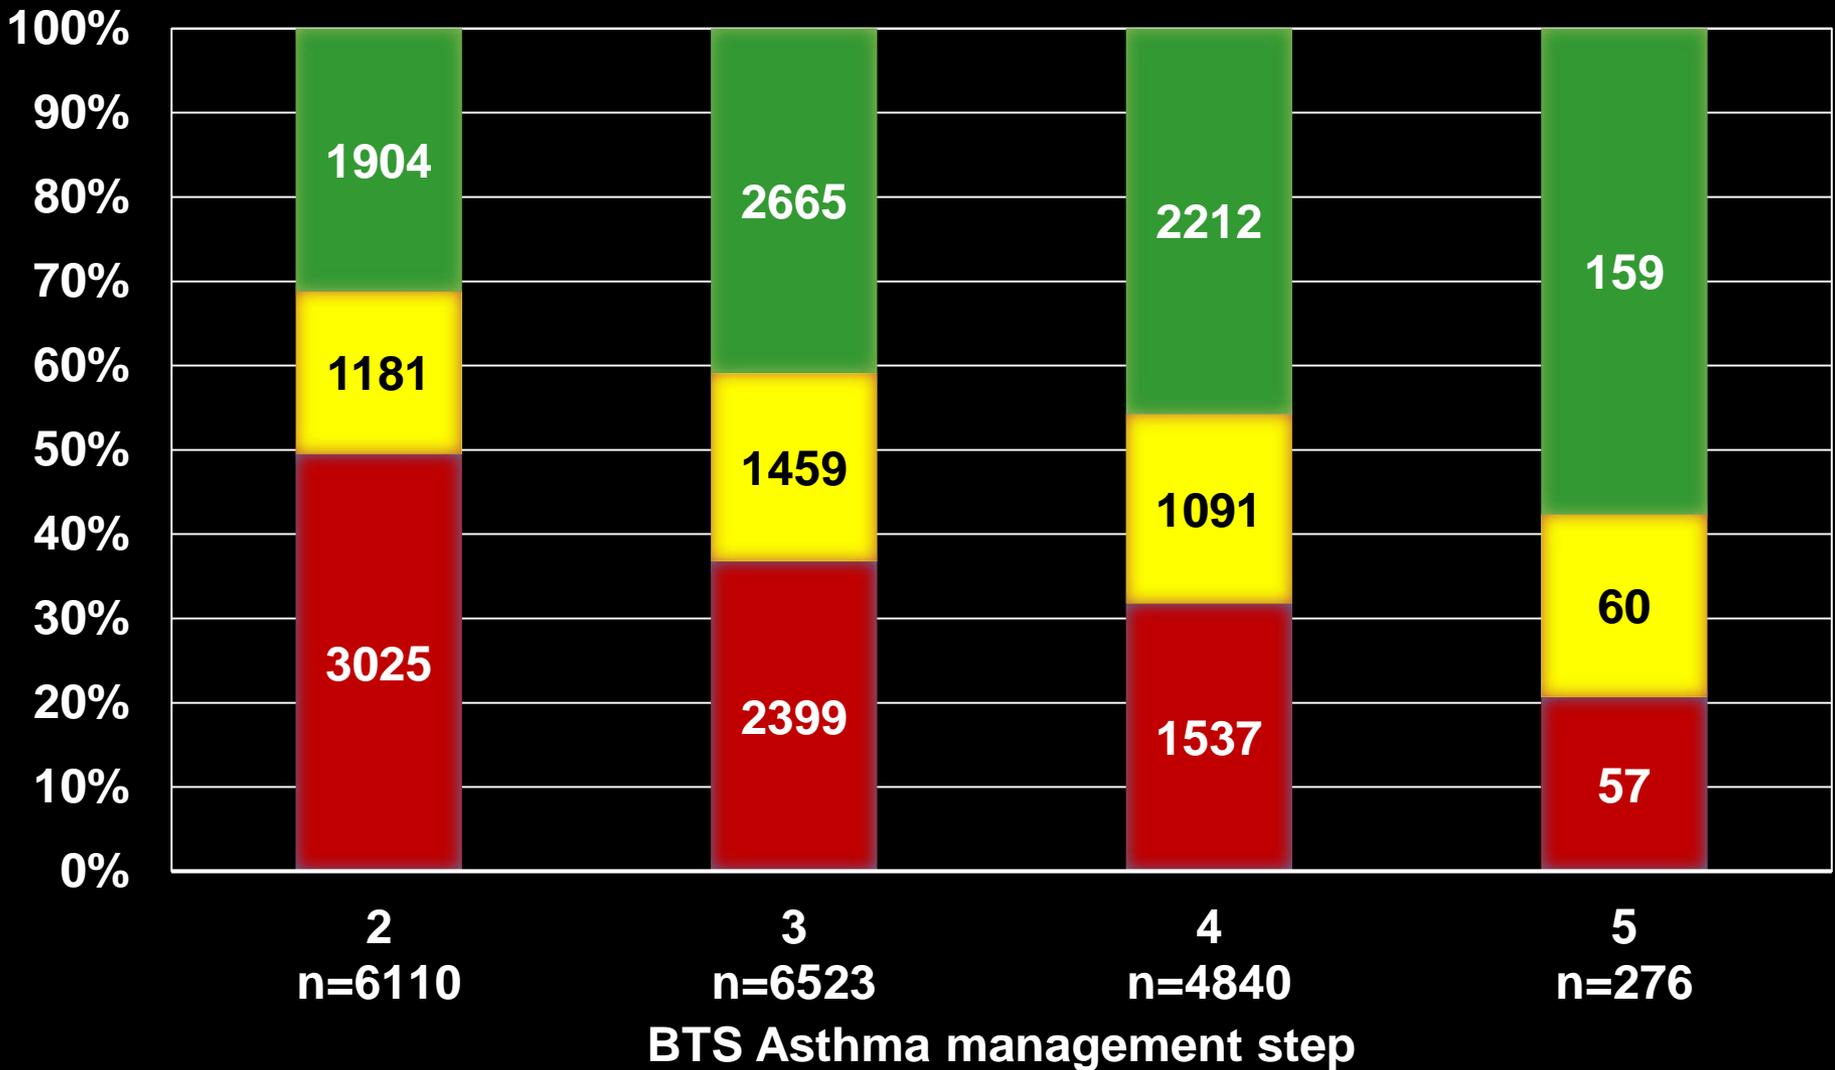

<sup>c</sup>Q: Thinking about the last week...how many times have you used your reliever inhaler?

<sup>d</sup>Q: How many times have you been treated in Accident and Emergency or the hospital ED for your asthma in the past 12 months?

<sup>e</sup>Q: How many times have you needed a course of steroid tablets for worsening asthma? (In the last 12 months...); answers combined for once or more

# Level of ICS Adherence in Asthma

Adherence    ■ <50%    ■ 50-75%    ■ >75%

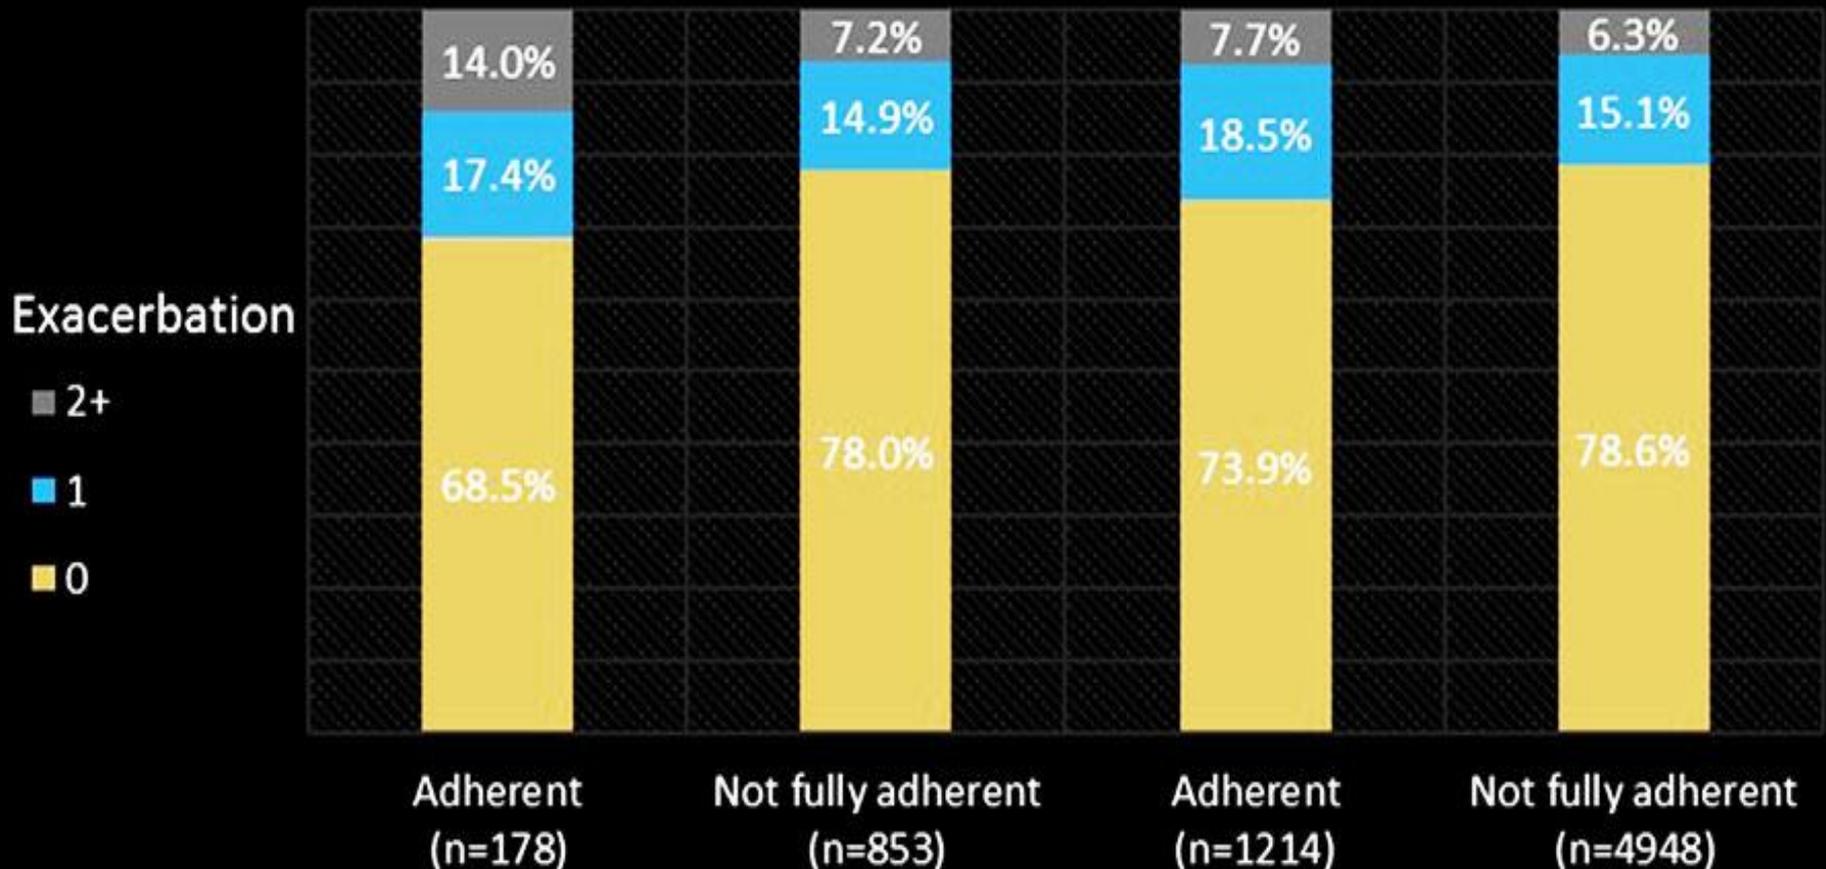

# ICS Adherence vs. Asthma Exacerbations in Moderate-to-Severe Asthma

# Inhaler Satisfaction Improves Asthma outcomes

# GINA 2019 氣喘治療指引

第5階

高劑量ICS-LABA  
轉介給專科醫師

第4階

可考慮加上  
tiotropium, 抗-IgE,  
抗-IL5/5受體,  
抗-IL4受體

中劑量ICS-  
LABA

第3階

低劑量  
ICS-LABA

第2階

每天使用低劑量ICS  
或  
有需要時使用低劑量  
ICS-formoterol<sup>+</sup>

第1階

有需要時使用低劑  
量 ICS-formoterol<sup>+</sup>

首選控制型藥物  
預防急性發作及  
症狀控制

其他控制型藥物

使用SABA時建議一  
併使用低劑量ICS

LTRA 或使用SABA時，  
建議一併使用低劑量ICS<sup>#</sup>

中劑量 ICS或低劑量 ICS，  
劑量ICS + 高劑量 ICS，  
LTRA 加tiotropium  
或 LTRA \*\*

考慮副作用後酌量使  
用低劑量口服類固醇

建議緩解型藥物

有需要時使用低劑量 ICS-formoterol<sup>+</sup>

有需要時使用低劑量 ICS-formoterol<sup>+</sup>

其他緩解型藥物

有需要時使用SABA

- \* 當以BUD/form或BDP/form進行維持及緩解療法時，建議使用低劑量的ICS-form作為緩解藥物。
- \*\* 同時具過敏性鼻炎且FEV<sub>1</sub>>70%預測值時，可考慮加上HDM SLIT。

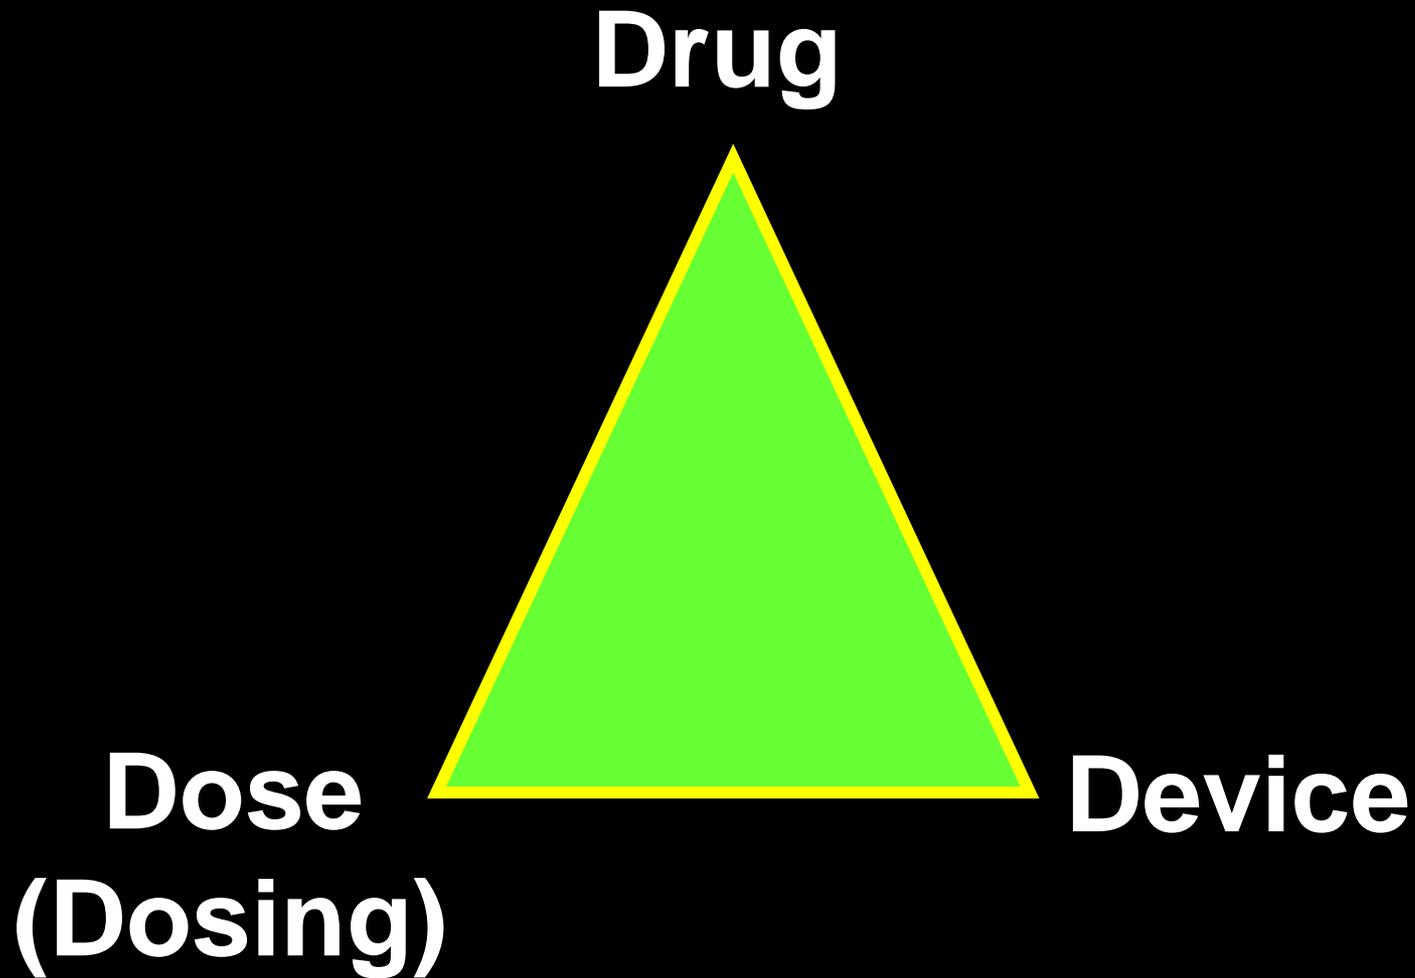

+ 尚未取得適應症：目前僅 Budesonide-formoterol (Bud-Form)有證據支持

# 尚未取得適應症：分開或者複方 ICS/SABA 吸入器

# ICS/LABA inhalers in Taiwan: Which is most appropriate for your patients ?

# Three “D”’s in inhaler therapy

# Drug

- **FF/VI**

**商品名: Relvar Ellipta**

**學名: Fluticasone furoate + Vilanterol**

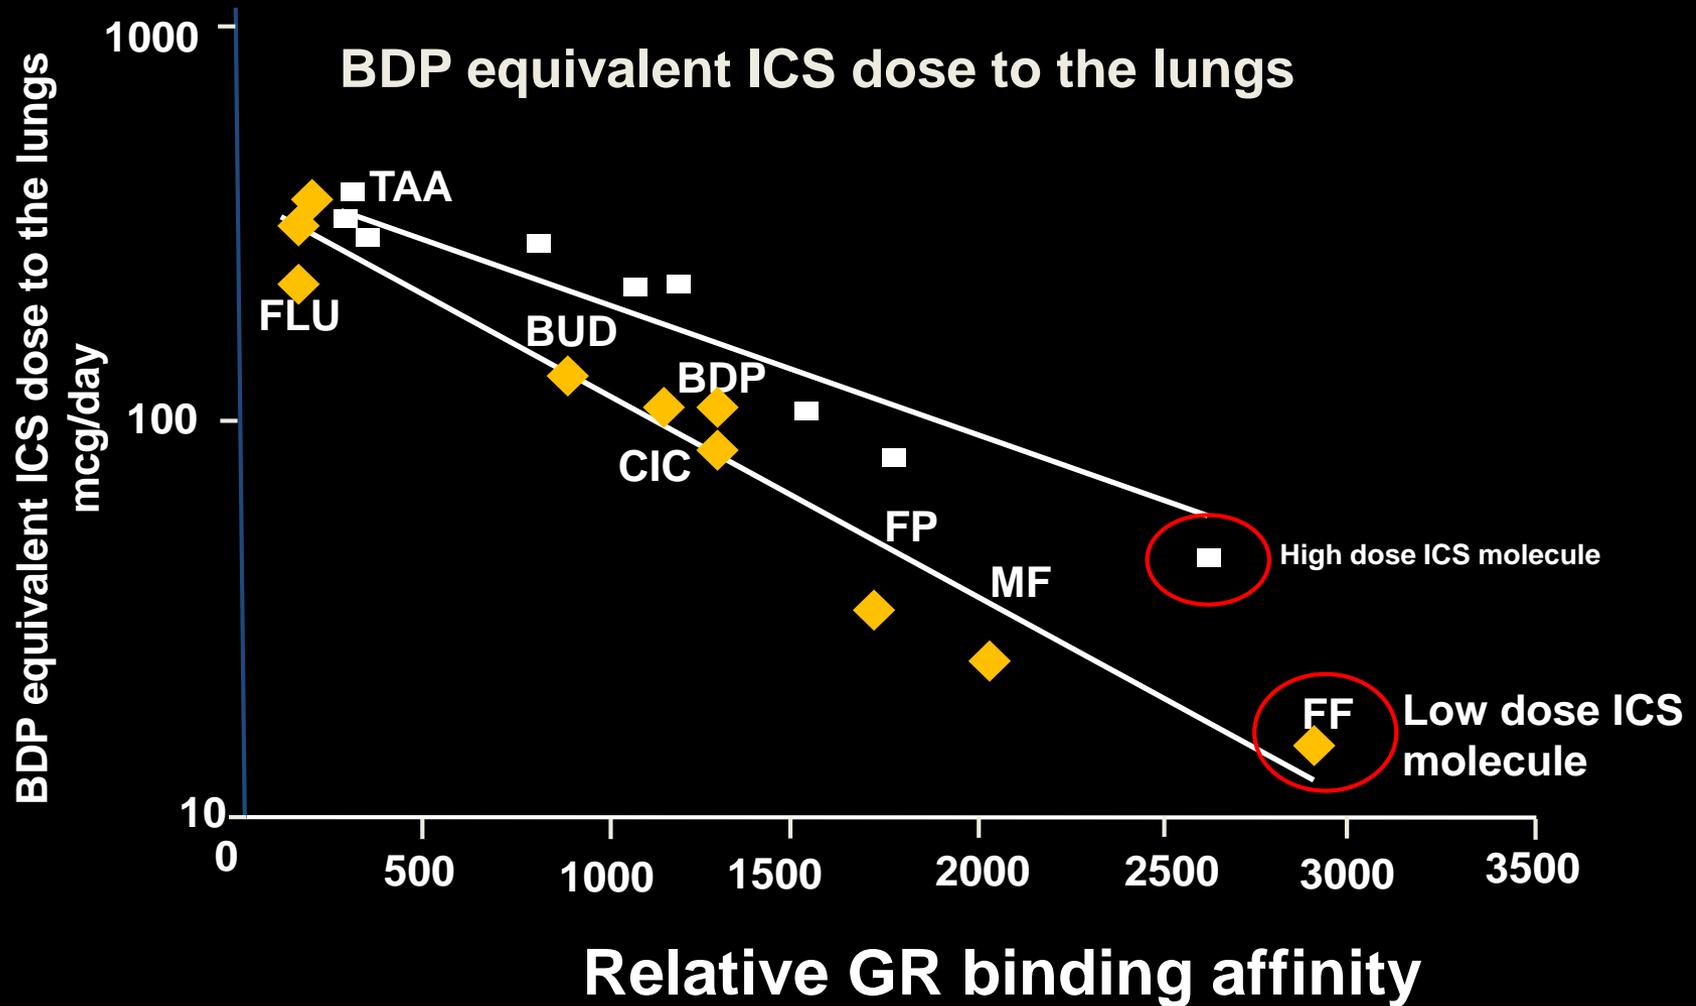

**中文名: 潤娃 易利達乾粉吸入器**

**劑量: 100/25, 200/25  $\mu\text{g}$  /劑 (92/22, 184/22  $\mu\text{g}$  /劑)**

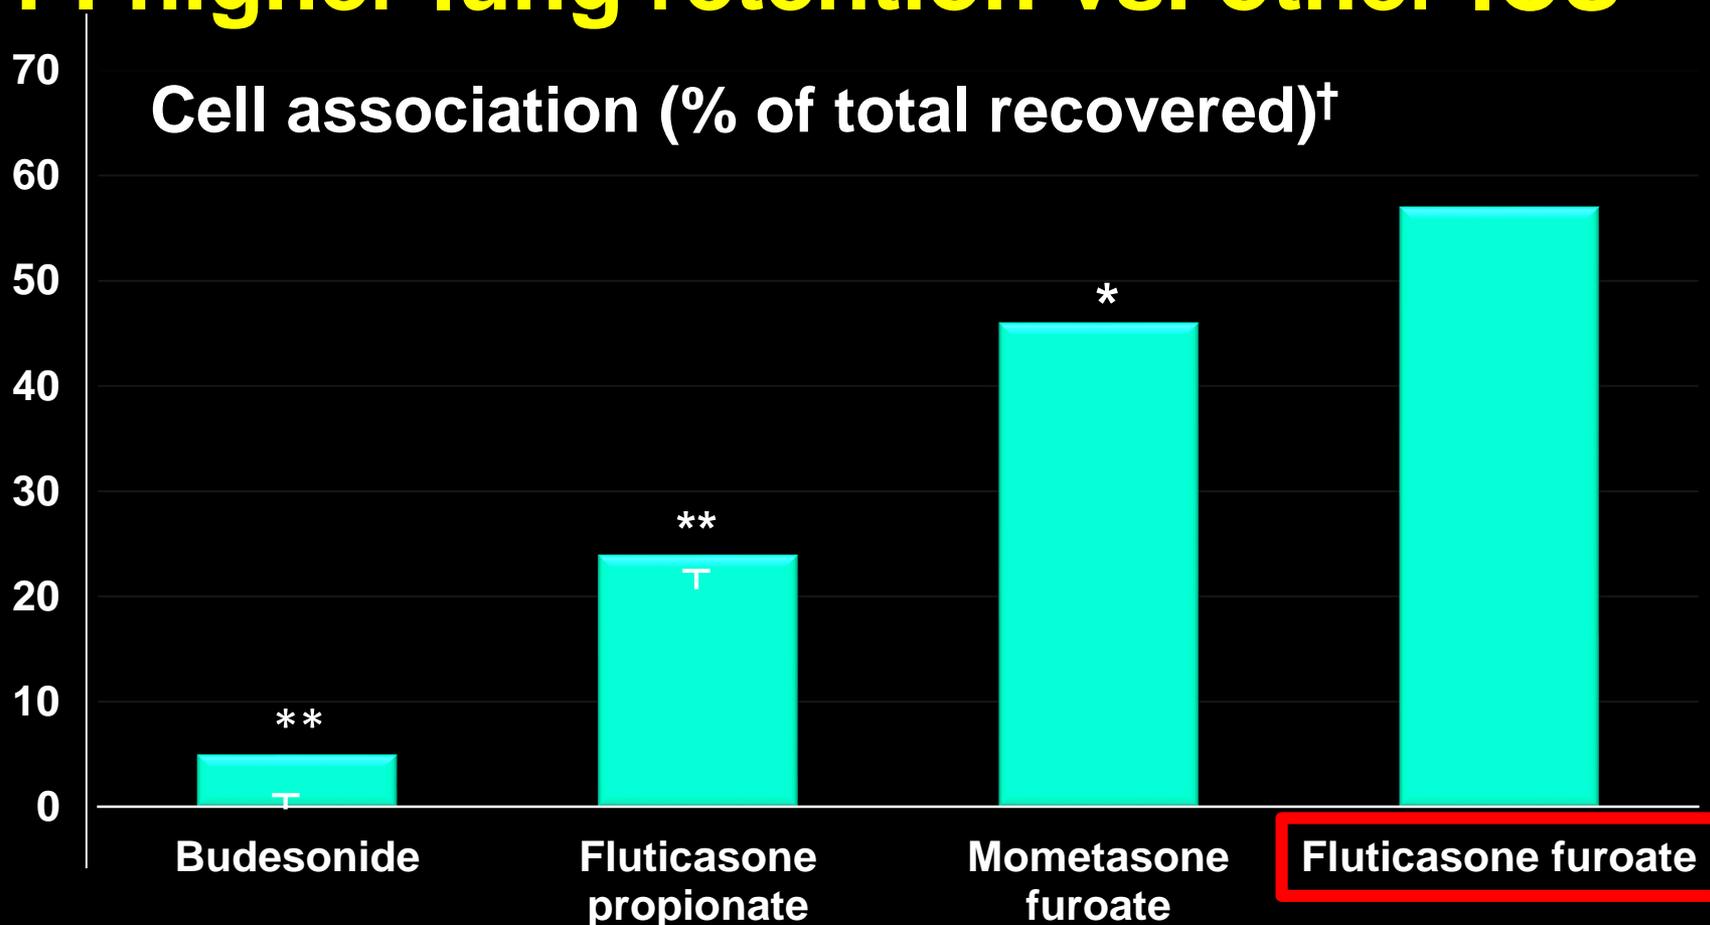

**一般用法: 吸入1劑 QD**

# GR Binding affinity of different ICSs

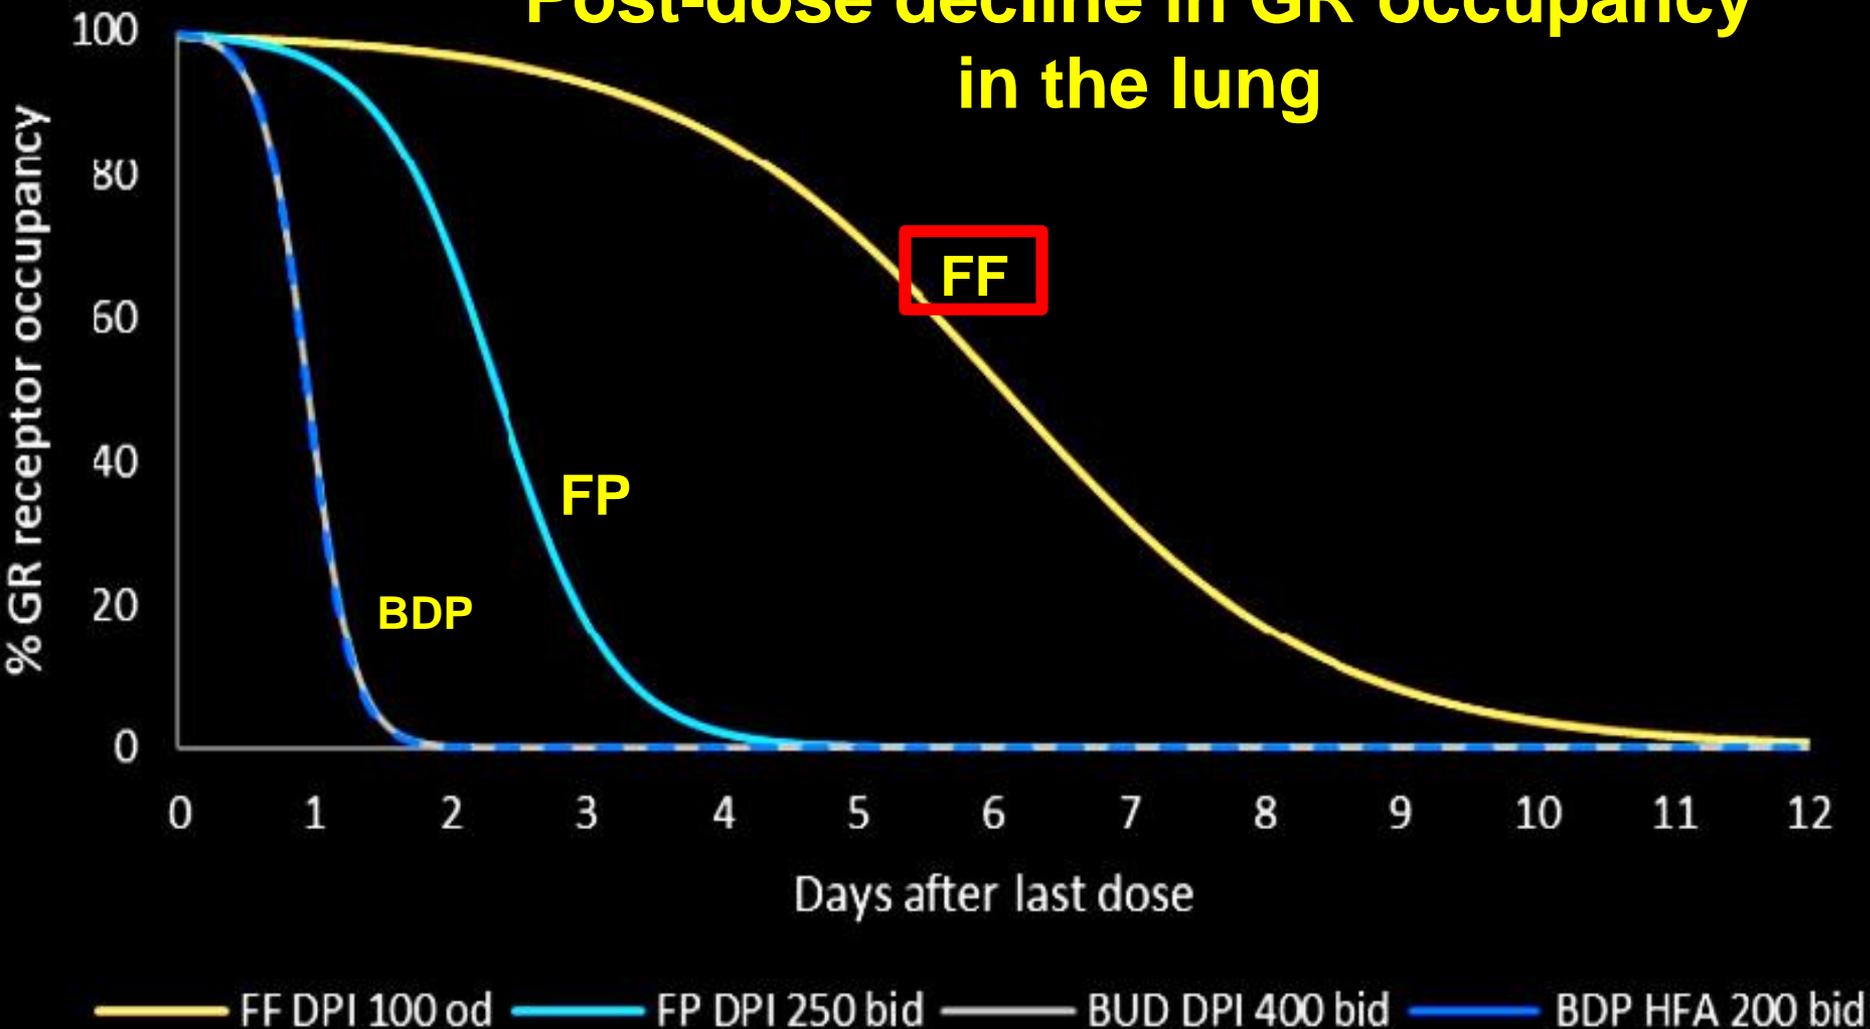

# FF: higher lung retention vs. other ICS

\* $P < 0.05$  versus FF; \*\* $P < 0.01$  versus; <sup>†</sup>Study design: using a monolayer of human lung epithelial (16HBE14o) cells. Cell association of ICS at the cell monolayer was determined and quantified as total recovery.

*Salter M et al. Am J Physiol Lung Cell Mol Physiol. 2007;293:L660–667.*

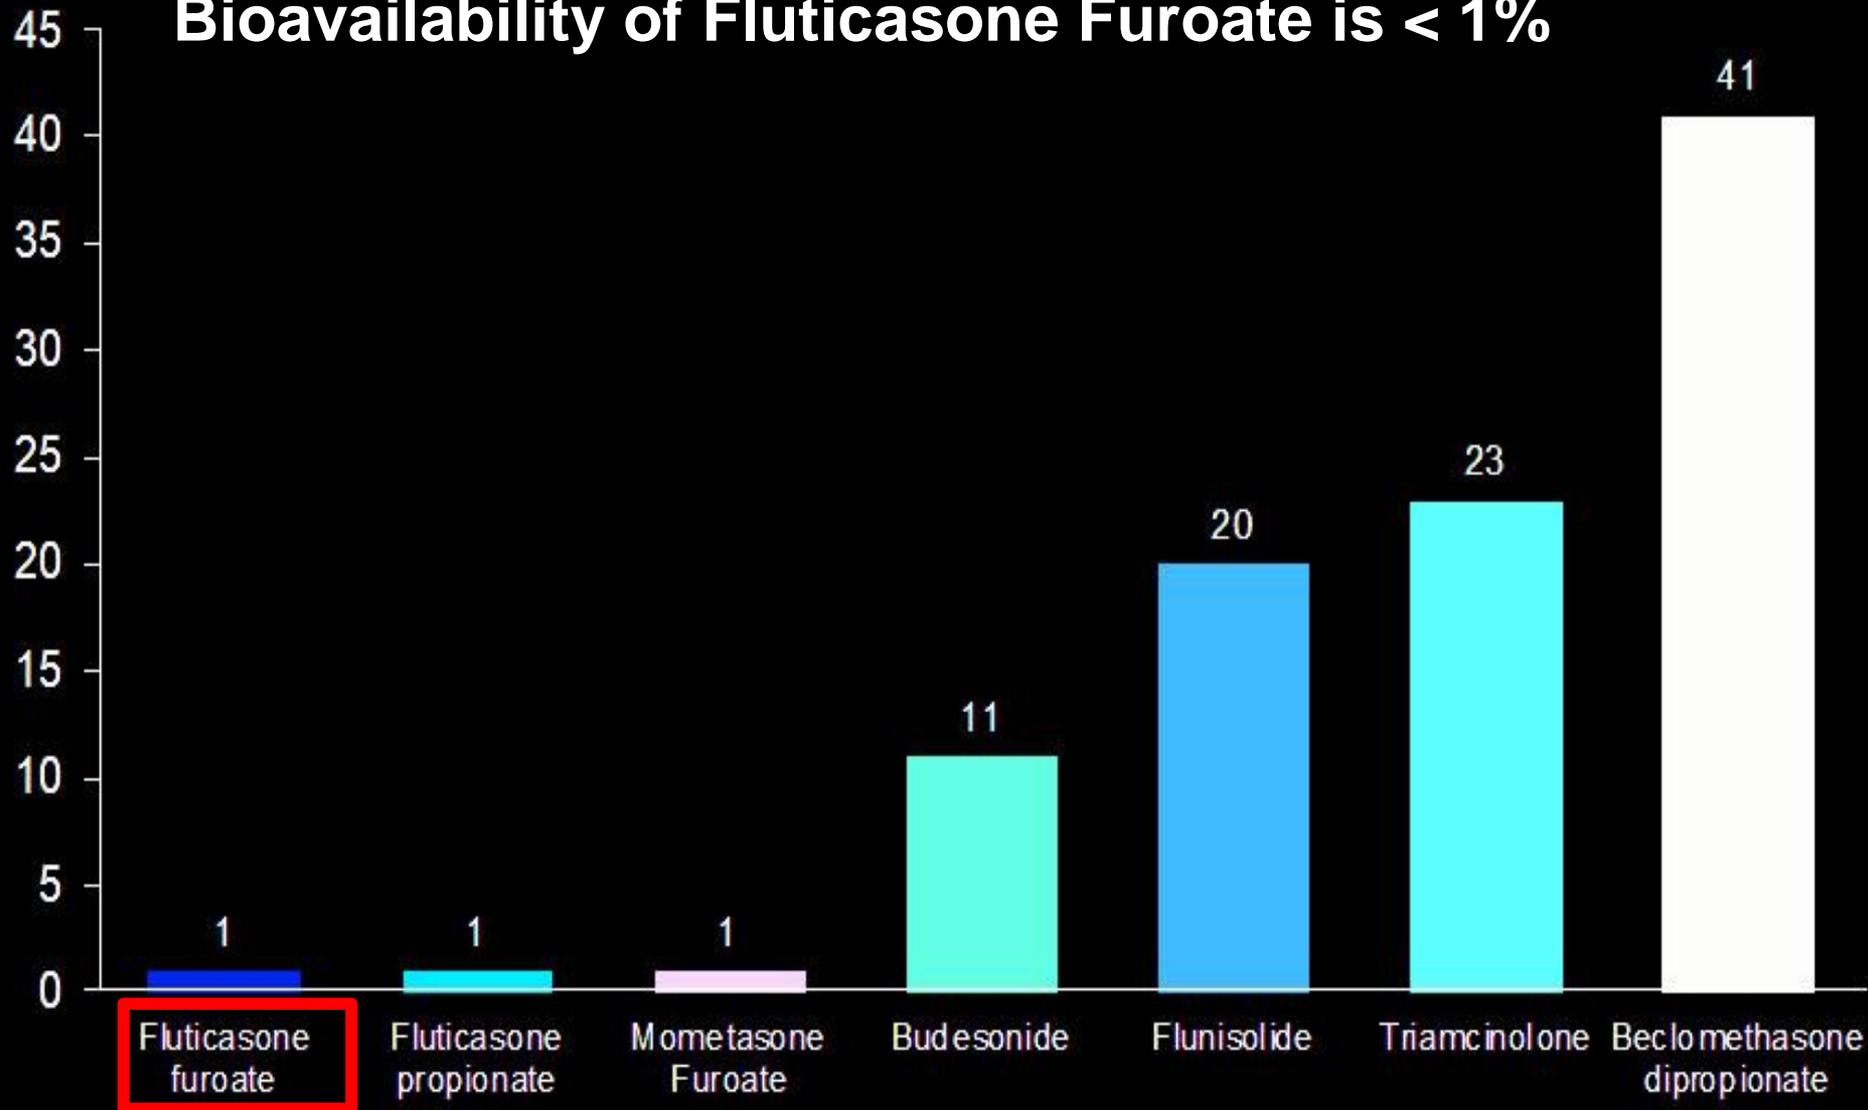

# Post-dose decline in GR occupancy in the lung

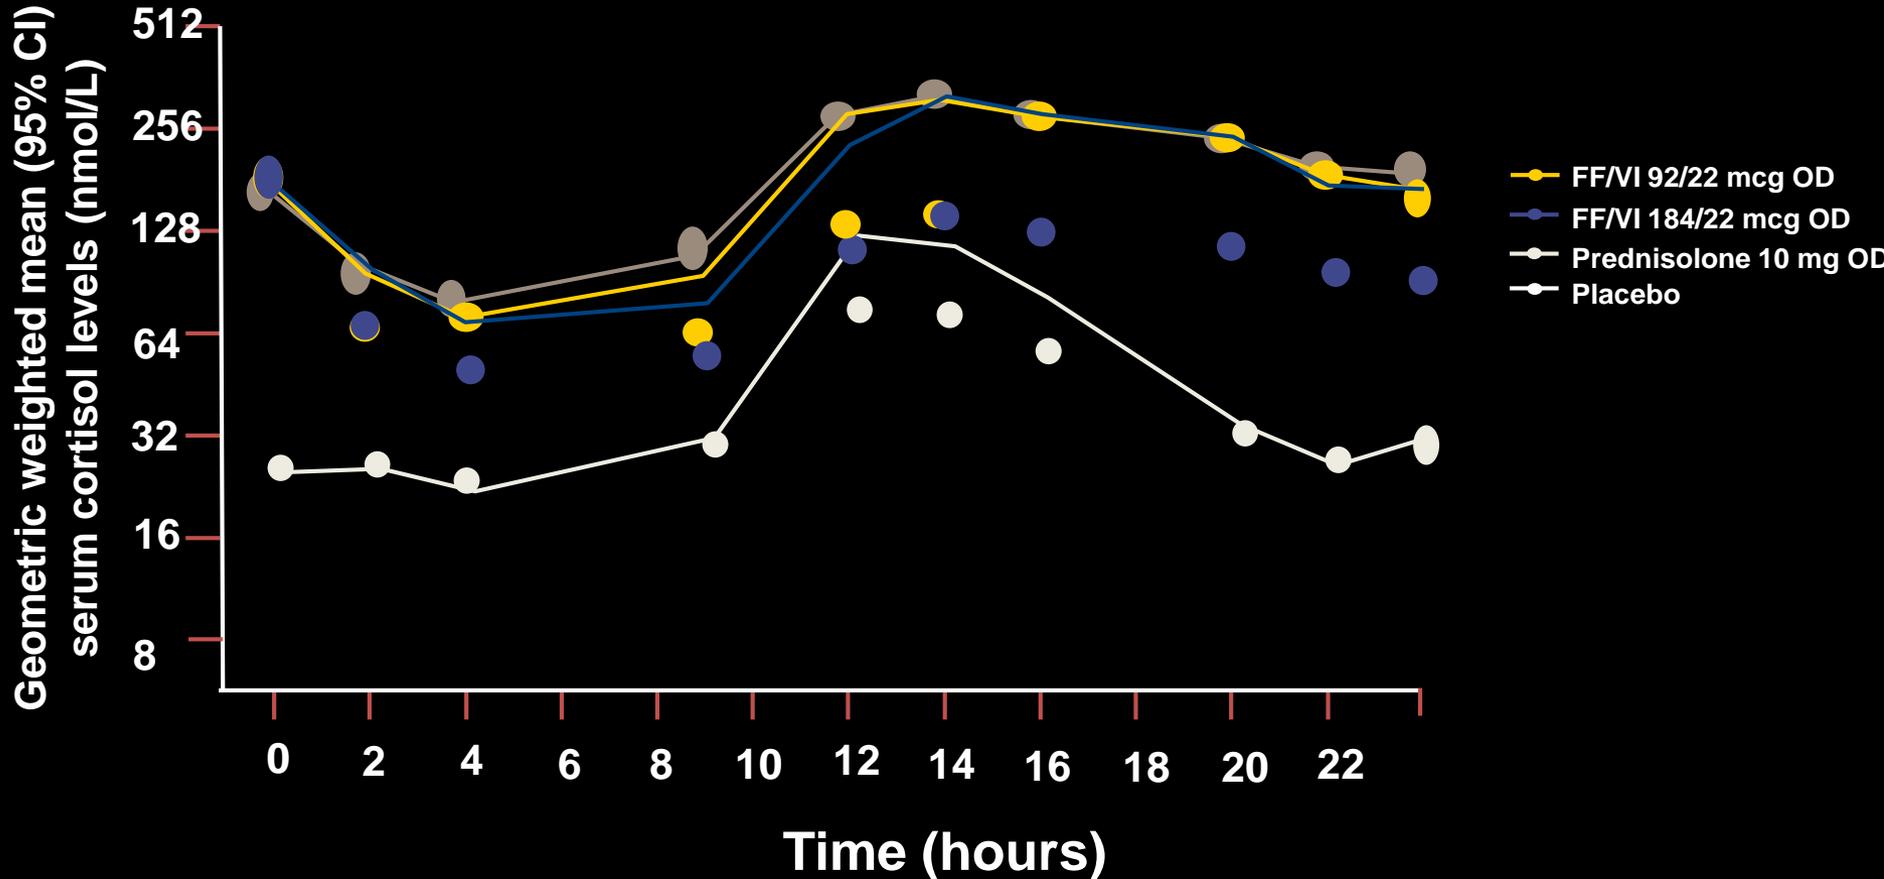

GR Occupancy values : theoretical maximum achievable assuming optimal drug delivery and tissue distribution in the lung and the lung bioavailable dose fully accessible for GR binding during dosing to steady state.

# Bioavailability: FF vs. other ICS molecules

Bioavailability of Fluticasone Furoate is  $< 1\%$

# Serum cortisol: FF has no significant effect at 42 days (n = 185)

Serum cortisol levels were notably lower in the prednisolone

# Vilanterol (VI): Once-daily bronchodilator

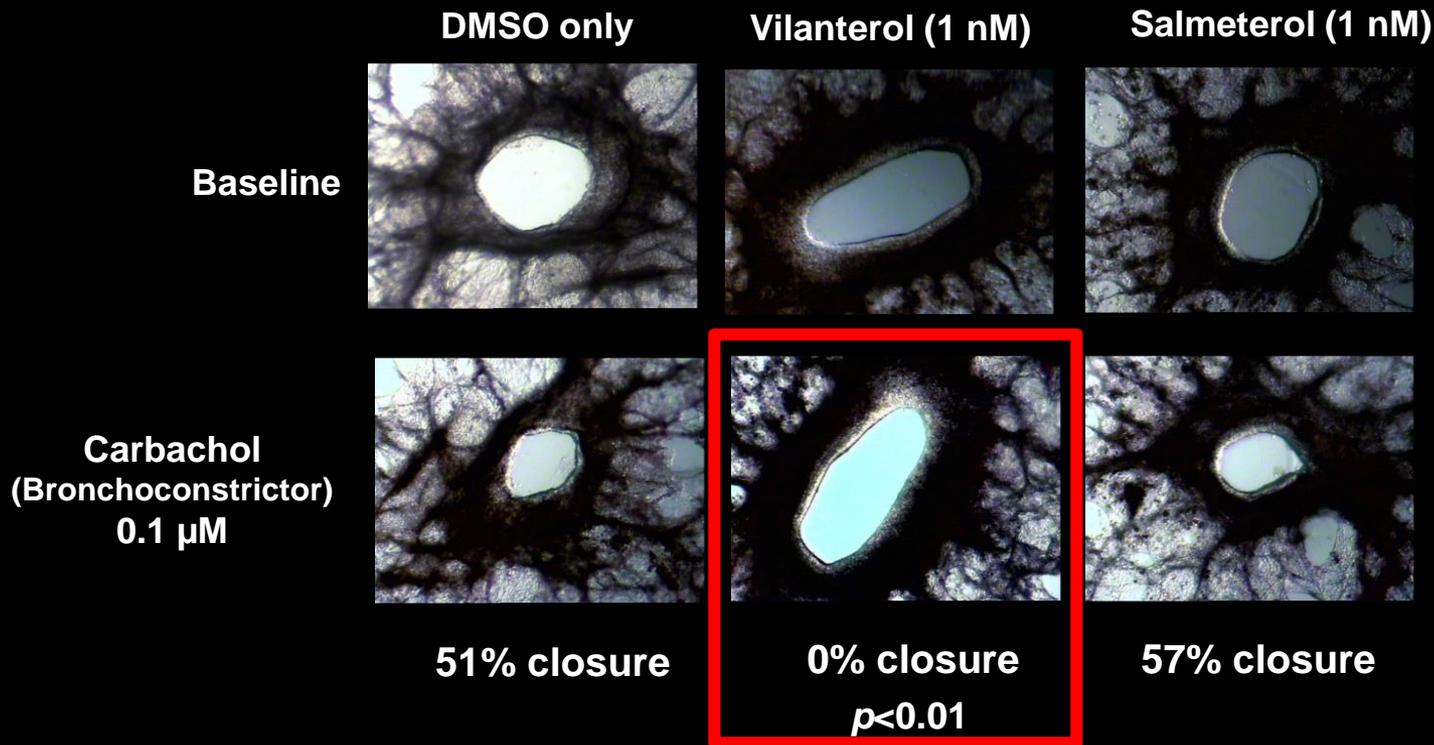

## *In-vitro* data

---

<b>Affinity for <math>\beta_2</math>-AR</b>	<b>= salmeterol &gt; formoterol &gt; Indacaterol</b>
<b>Persistence of action at <math>\beta_2</math>-AR</b>	<b>= indacaterol &gt; formoterol</b>
<b>Selectivity of <math>\beta_2</math>-AR (vs <math>\beta_1</math> and <math>\beta_3</math>)</b>	<b>&gt; formoterol &gt; indacaterol = salmeterol</b>

Vilanterol is not licensed as monotherapy.

# Vilanterol: Longer duration of action than salmeterol

*in-vitro* data

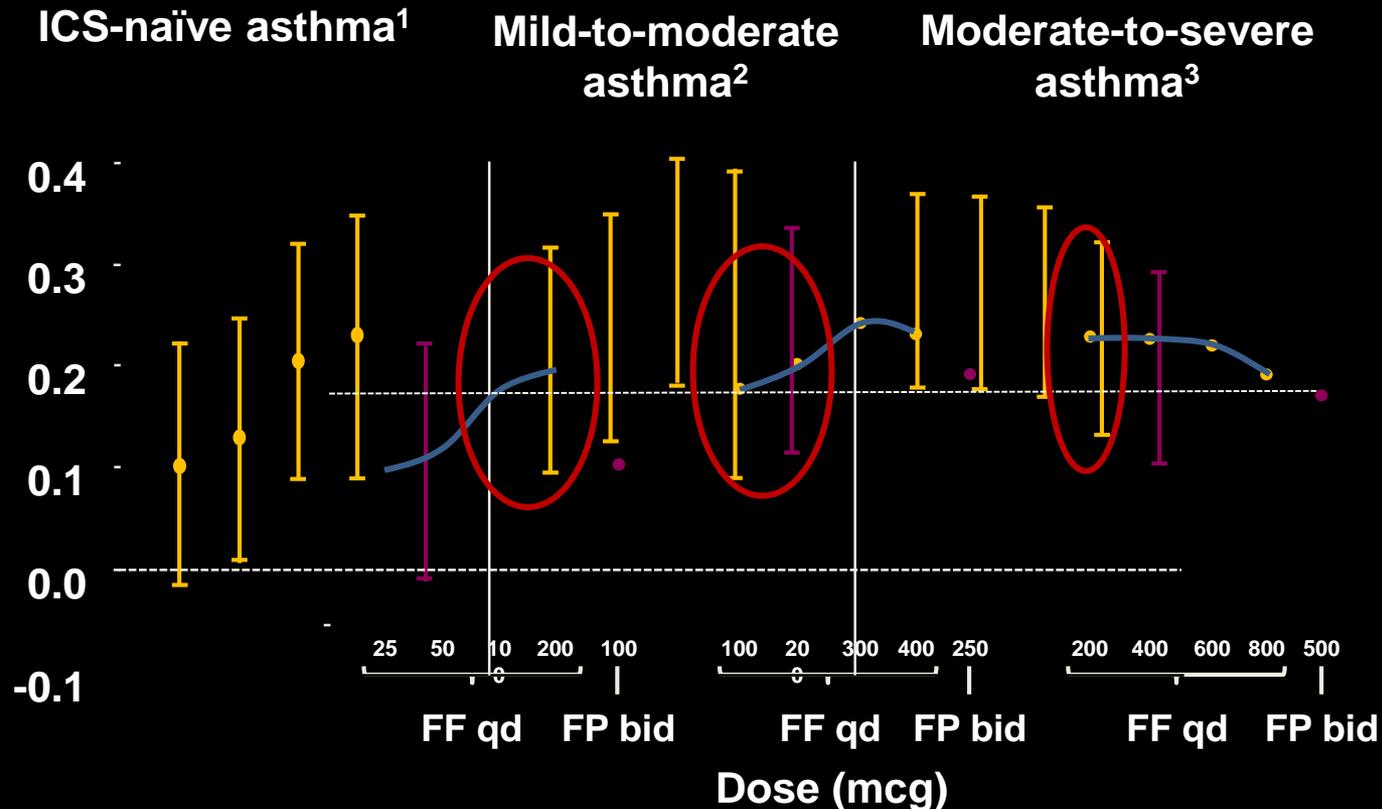

# Dose and Dosing

- QD

# The optimal doses of FF: 100 and 200 $\mu\text{g}$

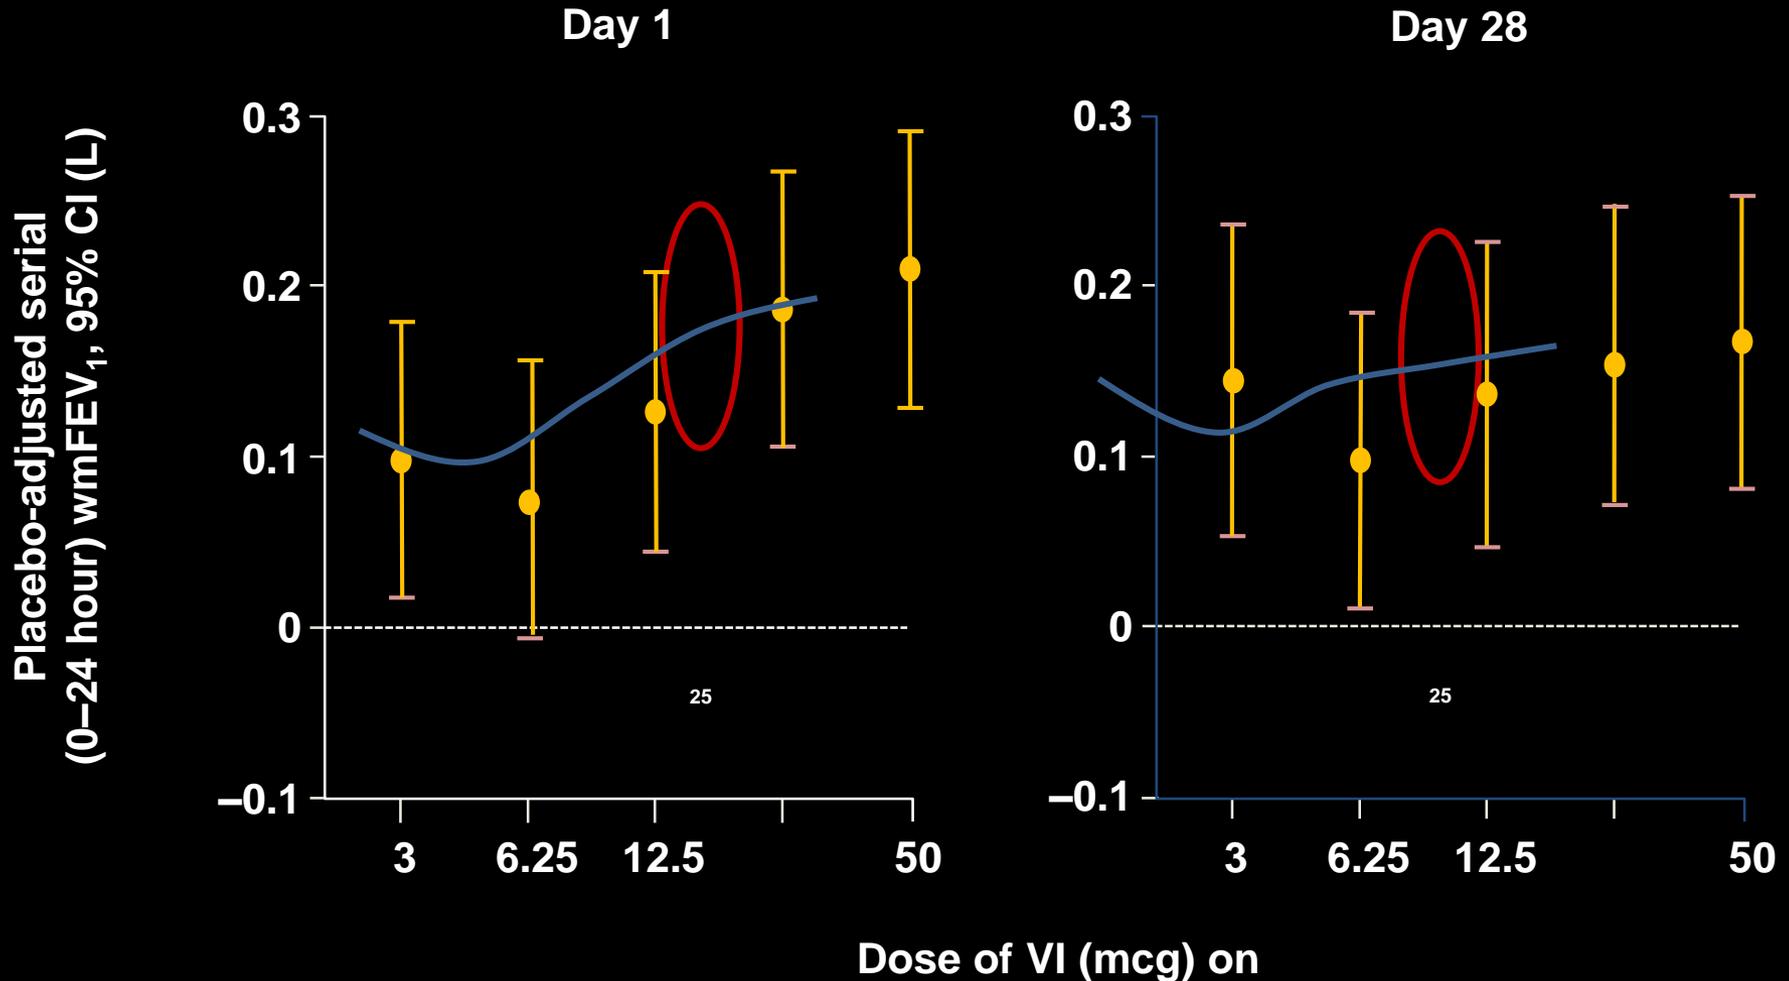

## Trough FEV<sub>1</sub> at Week 8 in 3 phase II studies in asthma

1. Bateman ED et al. *Respir Med.* 2012;106:642–650; 2. Bleecker ER et al. *Ann Allergy Asthma Immunol.* 2012;109:353–358; 3. Busse WW et al. *Thorax.* 2012;67:35–41.

# The optimal dose of VI: 25 $\mu\text{g}$

Lung function in asthma assessed by weighted mean  $\text{FEV}_1$

**Q**

**( A or B ) FF/VI (Relvar) 100/25 之 ICS strength 屬於 :**

**A. Low dose ICS**

**B. Medium dose ICS**

**C. High dose ICS**

# Low, medium and high dose ICSs ( $\geq 12$ years)

	Low	Medium	High
<b>Beclometasone dipropionate (CFC)</b>	200–500	>500–1000	>1000
<b>Beclometasone dipropionate (HFA)</b>	100–200	>200–400	>400
<b>Budesonide (DPI)</b>	200–400	>400–800	>800
<b>Ciclesonide (HFA)</b>	80–160	>160–320	>320
<b>Fluticasone furoate (DPI)</b>	100	n.a.	200
<b>Fluticasone propionate (DPI or HFA)</b>	100–250	>250–500	>500
<b>Mometasone furoate</b>	110–220	>220–440	>440
<b>Triamcinolone acetonide</b>	400–1000	>1000–2000	>2000

- This is not a table of equivalence, but of estimated clinical comparability
- Most of the clinical benefit from ICS is seen at low doses
- High doses are arbitrary, but for most ICS are those that, with prolonged use, are associated with increased risk of systemic side-effects

# Low, medium and high daily doses of ICS

Inhaled corticosteroid	Daily doses ( $\mu\text{g}$ ) ( $\geq 17$ years)		
	Low	Medium	High
Beclometasone dipropionate (CFC) <sup>†</sup>	200–500	600–1000	1200 – 2000
Beclometasone dipropionate (HFA)	100–200	300–400	500 – 800
Budesonide (DPI)	200–400	600–800	1000 – 1600
Ciclesonide (HFA)	80–160	240–320	400 – 640
<b>Fluticasone furoate (DPI)</b>	<b>N/A</b>	<b>100</b>	<b>200</b>
Fluticasone propionate (DPI)	100–250	300–500	600 – 1000
Fluticasone propionate (HFA)	100–250	300–500	600 – 1000
Mometasone furoate	200	400	800

# Device

- Ellipta

# Ellipta : 2003年左右開始研發，歷經十年於2013年上市

**Diskus**

- One 60-dose blister strip
- 'Blended' technology for combination products

**Ellipta**

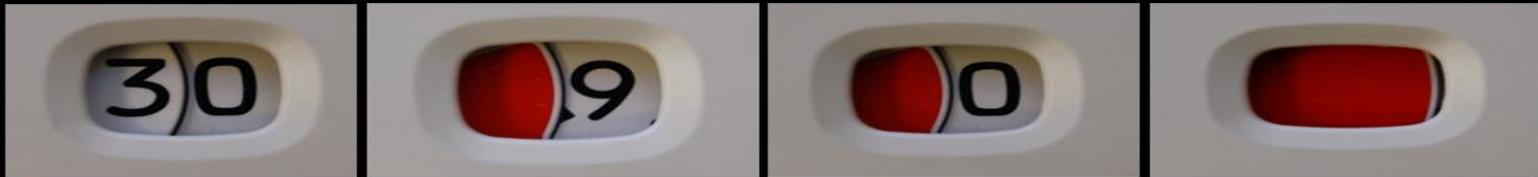

- Two 30-dose foil blister strips for combination products
- Individual formulation development

# Ellipta - designed for simplicity and ease of use

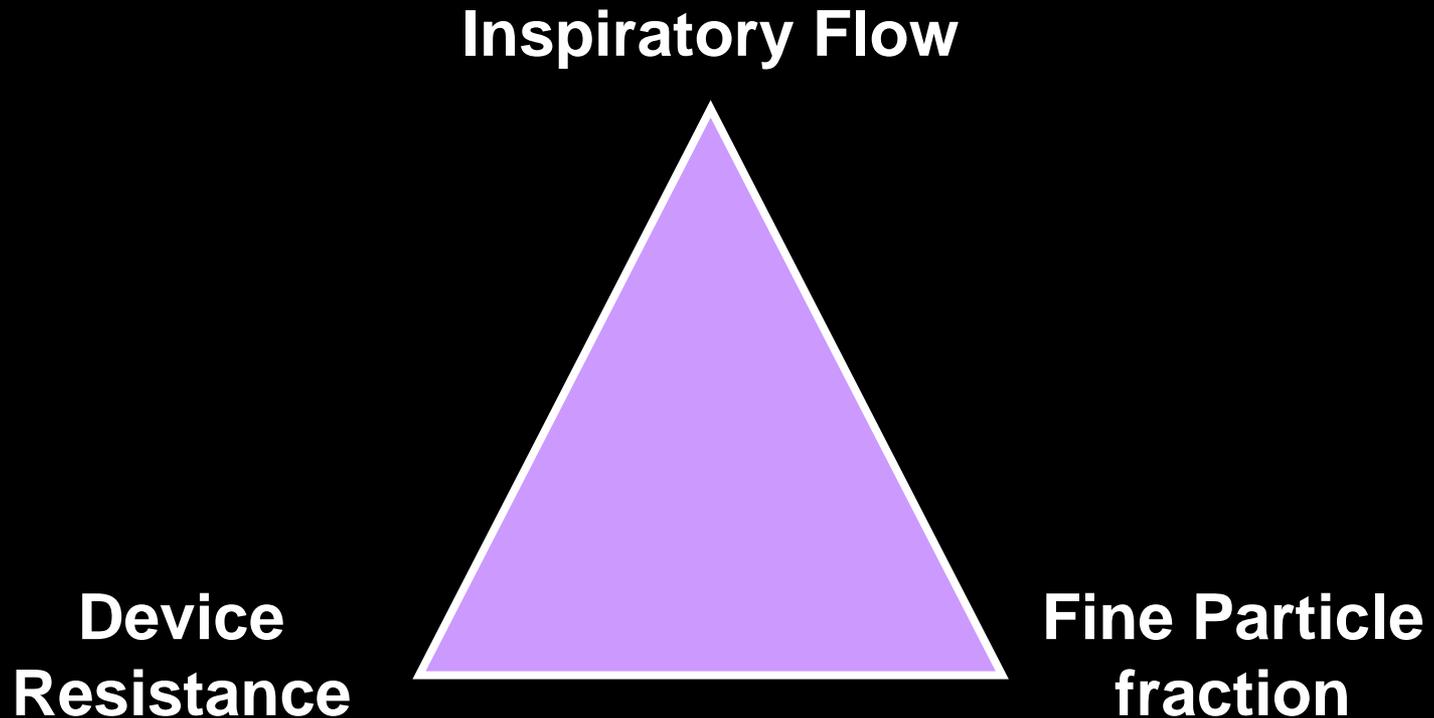

# Ellipta操作步驟

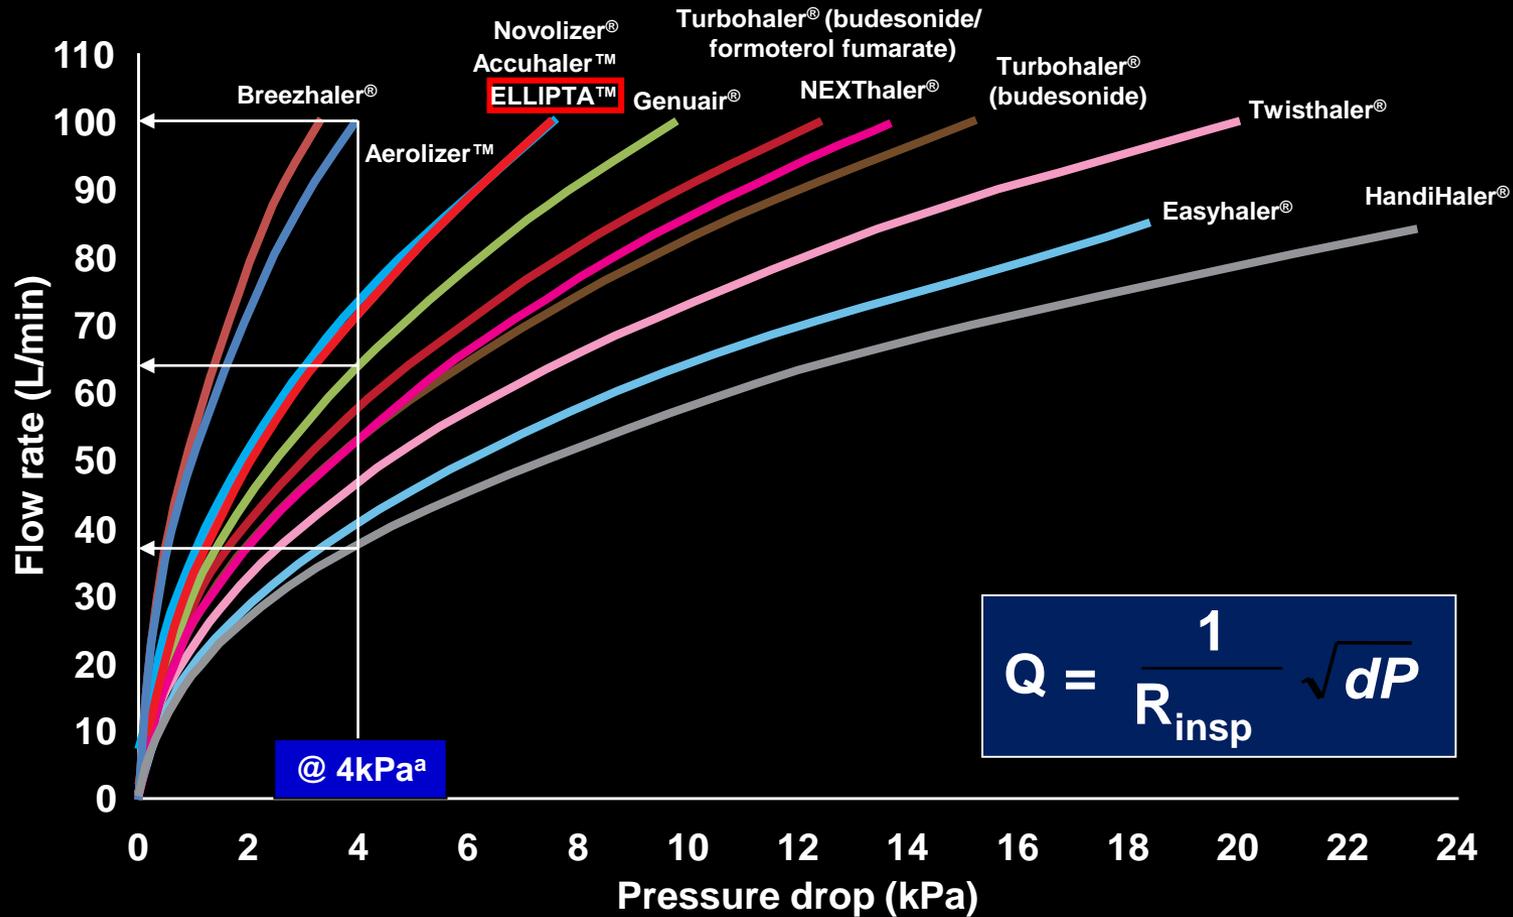

- 完全打開吸口蓋 (聽到「卡嗒」聲)，劑量計數器會遞減數字，確認已上好一劑藥物。

# DPI: Evaluating Drug Delivery

# Ellipta: Medium resistance DPI

<sup>a</sup>typical pressure drop for DPI testing, rated to be achievable and relevant for COPD and asthma patients

# Internal resistance of DPI vs. FPF

- Devices with low variability and medium inspiratory resistance can combine the positive aspects of
  - Achievable flow rates
  - Consistent and efficient fine particle generation
  - Reduced impaction losses in the upper airways

**Low resistance**

→ higher flow rate

→ higher FPD

→ higher impaction losses

**Medium  
Resistance**

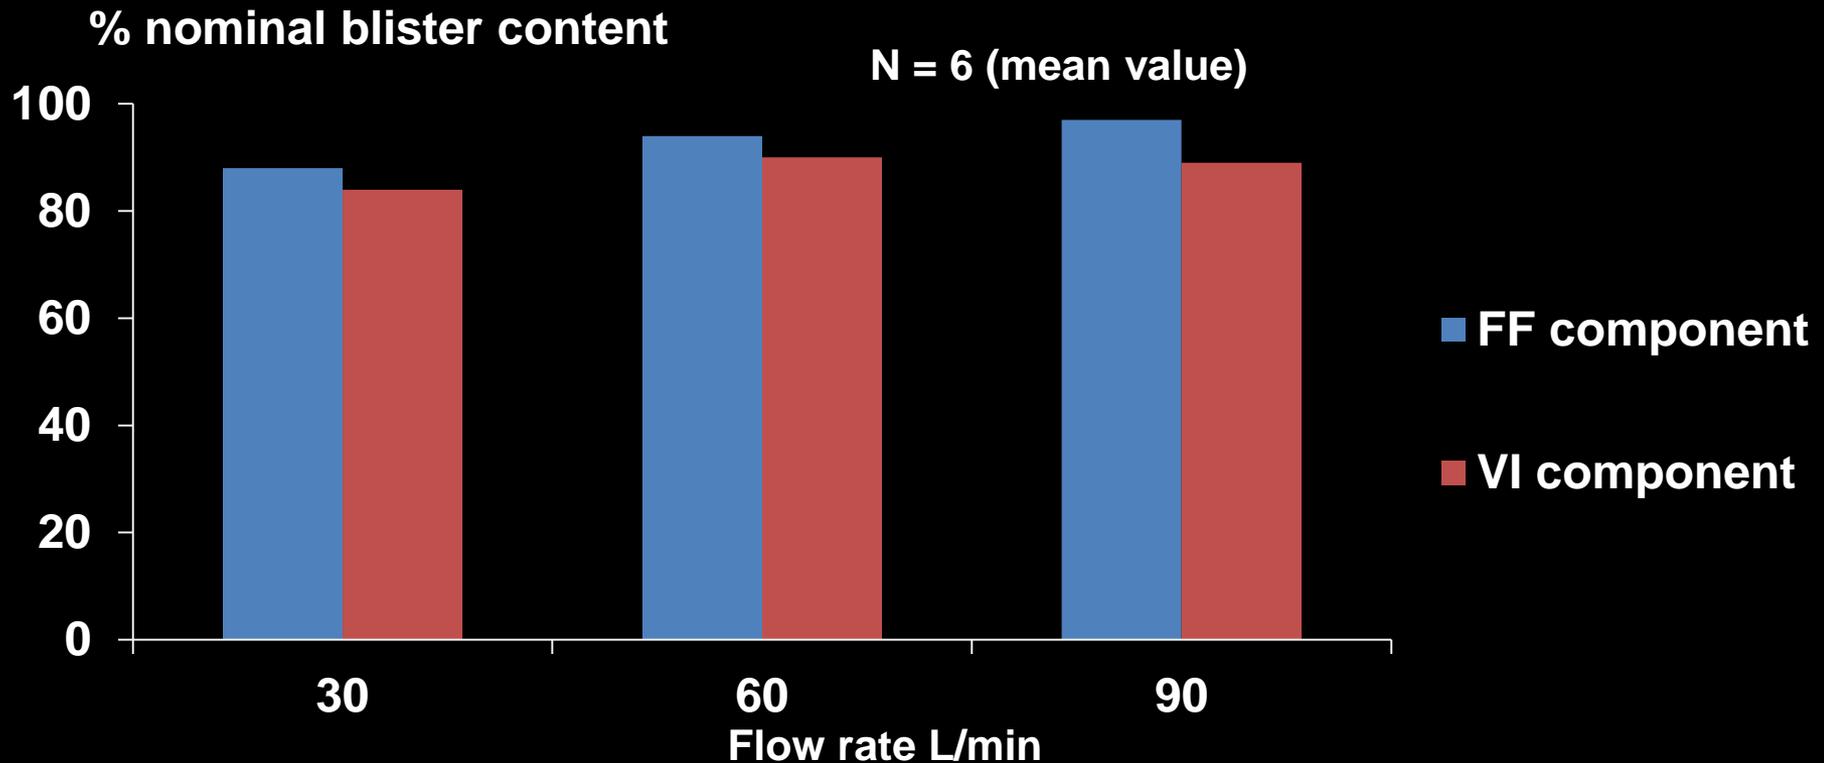

**High Resistance**

→ lower flow rate

→ lower impaction losses

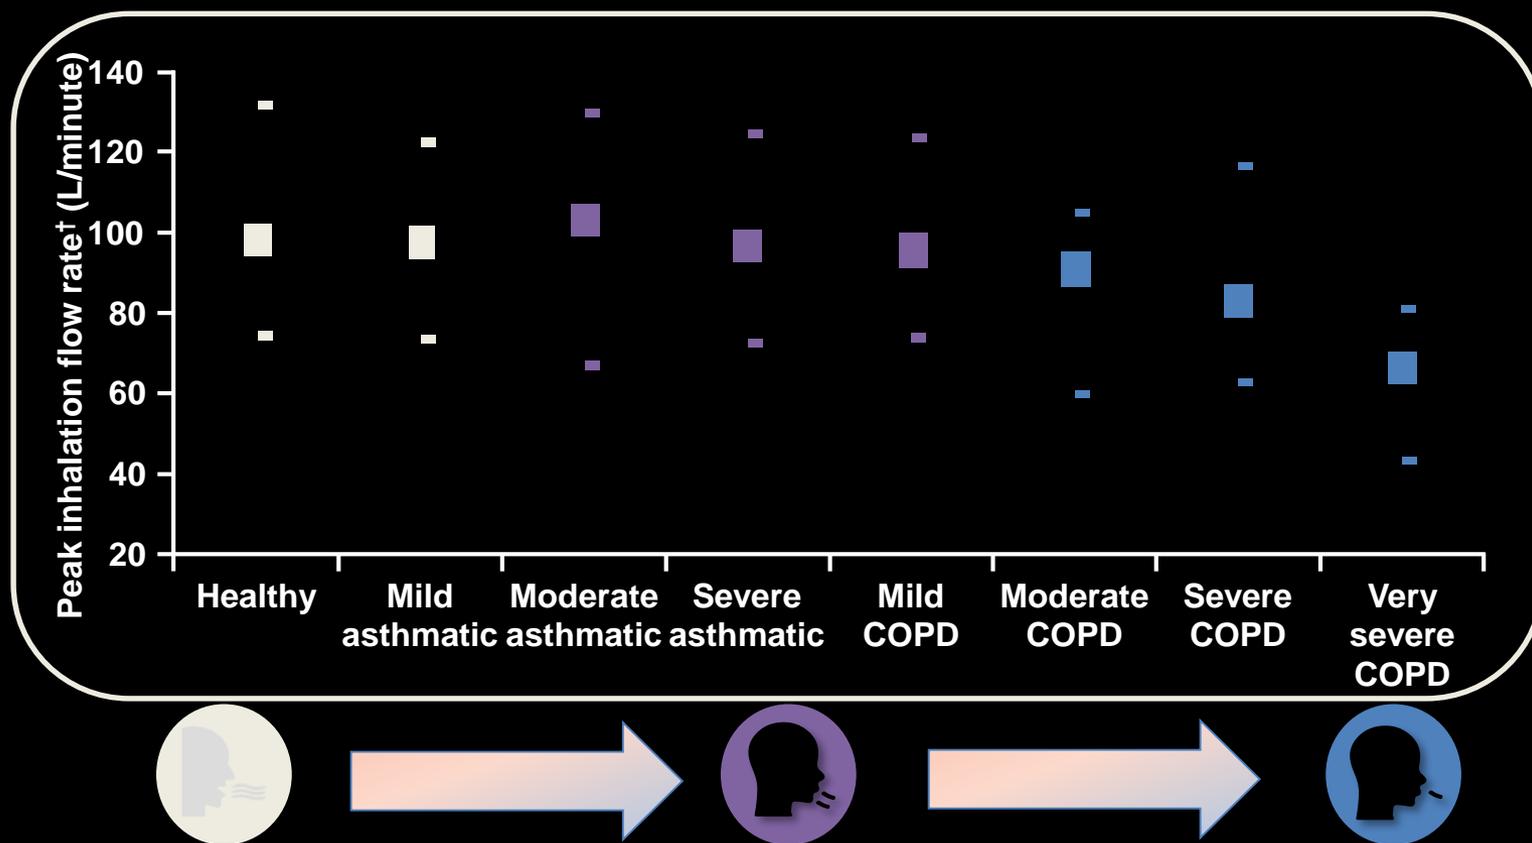

→ lower FPD

# Elliptas: *in vitro* dose delivery across flow rates of 30, 60 and 90 L/min

	MMAD (range) (microns)
FF	4.0 (3.6 – 4.8)
VI	2.3 (2.0 – 2.6)

# Ellipta: Suitable for patients with mild asthma through to very severe COPD

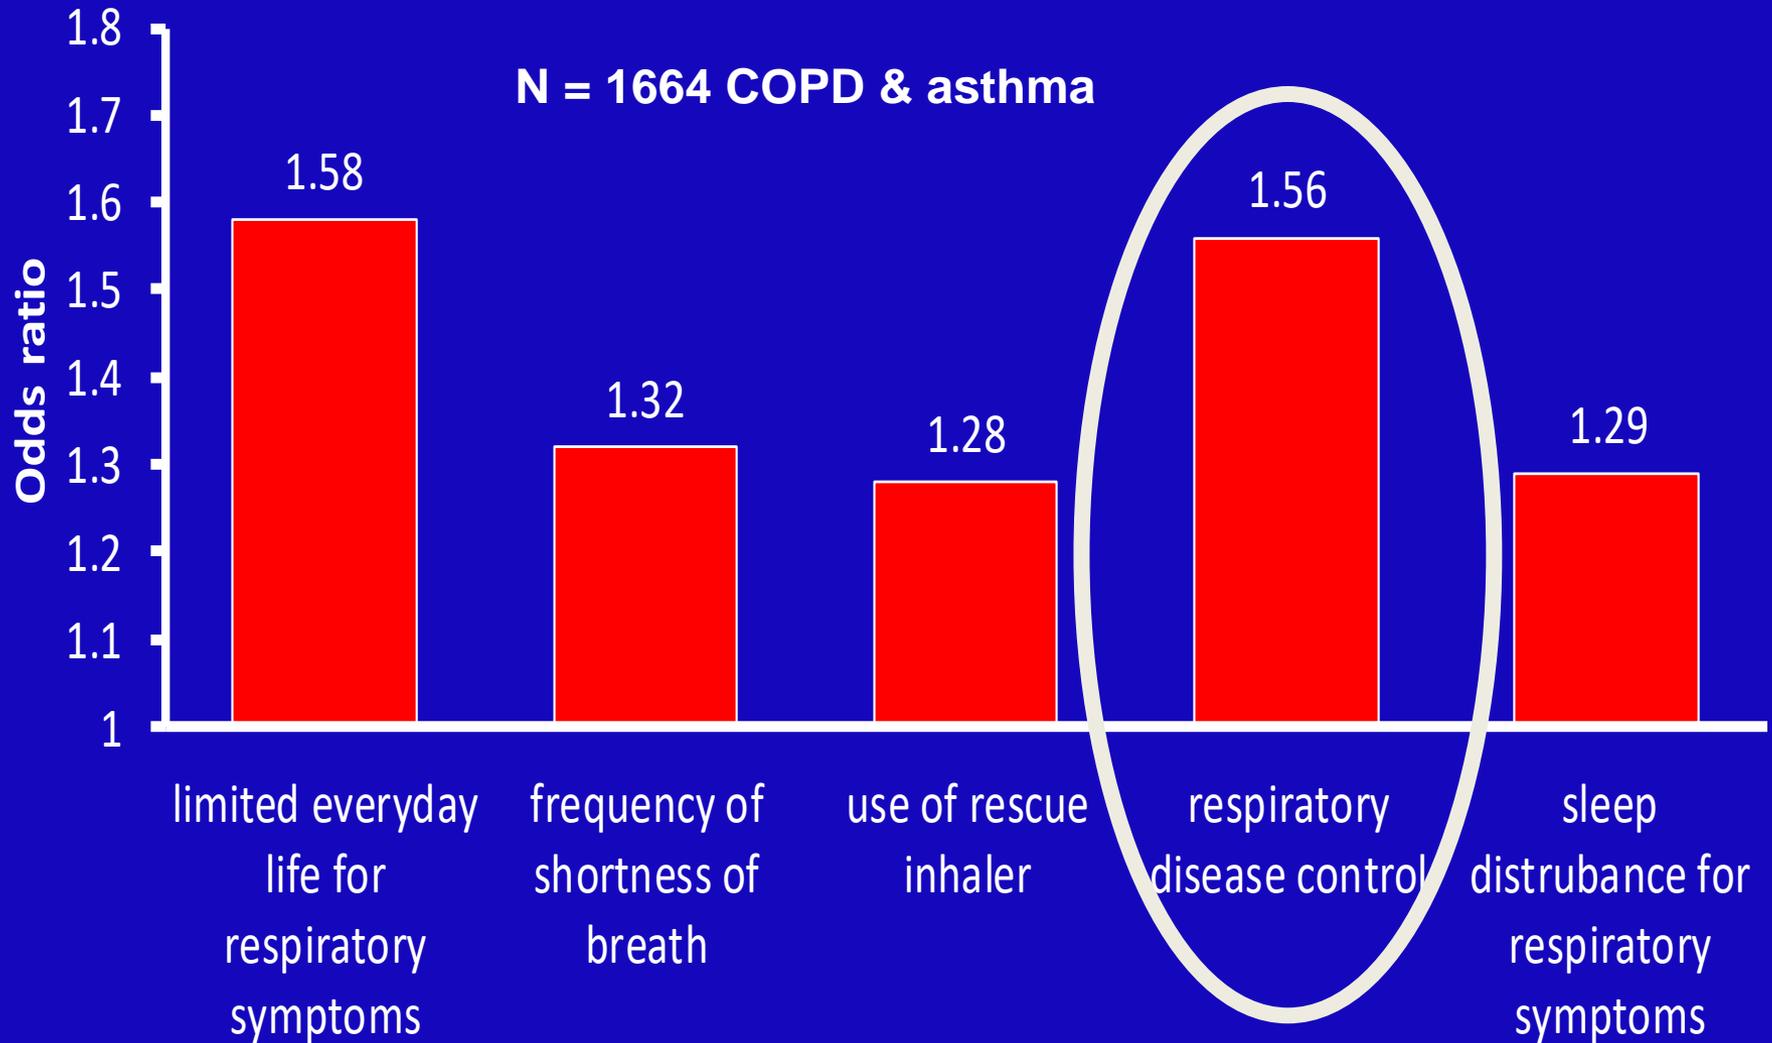

†Mean and absolute range. Disease severity categorised by GINA and GOLD guidelines (very severe COPD:  $FEV_1/FVC < 70\%$ ,  $FEV_1 < 30\%$  predicted or  $FEV_1 < 50\%$  predicted plus chronic respiratory failure).

# Patients making critical errors (%)

What is your **next step** for persistent asthma despite of receiving **medium-dose ICS/LABA**?

To continue the current medications and improve patient-drug adherence

Add-on systemic treatments (e.g. systemic steroids, LTA..)

Step 5 Tx (e.g. tiotropium, Xolair, anti-IL5 mAb)

Shift to once daily ICS/LABA (e.g. Relvar)

# SMART

# Once daily & Twice daily

---

Stepwise treatment to achieve total  
asthma control

# Dosing frequency and adherence

Literature review of 57 publications (all treatments – in 1981)

## *Impact of interval between doses*

- Loss of effect with short half life
- Significance of missed dose

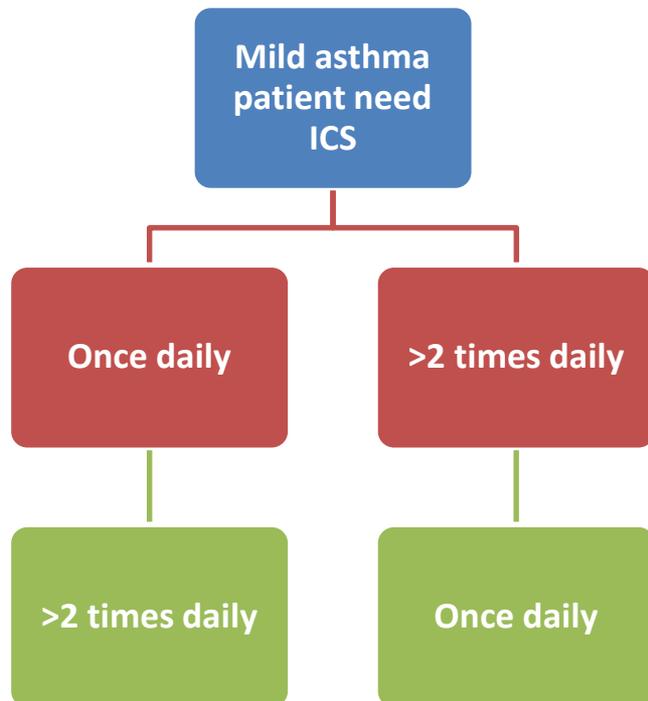

Greenberg RN. *Clin Ther* 1984;6:592-9.

Keen PJ. *J R Soc Med* 1991;84:640-1.

# Real-world effects of once vs greater daily inhaled corticosteroid dosing on medication adherence

Karen E. Wells, MPH<sup>\*</sup>; Edward L. Peterson, PhD<sup>\*</sup>; Brian K. Ahmedani, PhD<sup>†</sup>; and L. Keoki Williams, MD, MPH<sup>†,‡</sup>

Initial ICS dosing regimen	Initial adherence, mean (SD), %	Adherence after switch to alternate dosing regimen, mean (SD), % <sup>a</sup>	Difference in adherence after switch, mean (SD), % <sup>b</sup>	P value
Once daily (n = 62)	63.7 (32.1)	47.8 (30.2)	-15.9 (35.1)	.001
≥2 Times daily (n = 44)	48.1 (28.3)	74.4 (30.0)	26.3 (40.7)	.001

Once daily dosing was associated with an approximately 20% increase in adherence.

Once daily dosing was associated with higher adherence to ICS therapy

Need **High dose ICS**

Early achievement and maintenance of stable asthma control using initially higher-dose inhaled corticosteroids as part of combination therapy: an open-label pilot study

This article was published in the following Dove Press journal:  
Drug Design, Development and Therapy  
14 June 2013

Shih-Lung Cheng<sup>1,3</sup>  
Hao-Chien Wang<sup>2</sup>  
Sow-Hsong Kuo<sup>1</sup>

<sup>1</sup>Department of Internal Medicine, Far Eastern Memorial Hospital, Taipei, Taiwan; <sup>2</sup>Department of Chemical Engineering and Materials Science, Yuan-Ze University, Taichung, Taiwan; <sup>3</sup>Department of Internal Medicine, National Taiwan University Hospital, National Taiwan University, Taipei, Taiwan

**Background:** Uncontrolled asthma is characterized by considerable variability. Well controlled asthma is associated with less unplanned use of health care resources and fewer acute exacerbations. In this study, we attempted to increase inhaled corticosteroid (ICS) doses initially in suboptimally controlled asthmatics, hypothesizing that early achievement of asthma control using this strategy would be associated positively with a higher level of stability.

**Methods:** This was a randomized, open-label, prospective study including patients with uncontrolled asthma who were randomized to receive higher-dose (HD) ICS in combination with a long-acting beta-agonist (LABA) for one month and then shifted to doses suggested in the practice guidelines (GD) or to receive GD therapy alone. Lung function, ie, forced expiratory volume in one second (FEV<sub>1</sub>), peak expiratory flow, Asthma Control Test scores, and frequency of acute exacerbations, was followed up for one year.

**Results:** Seventy-six patients were treated with the HD strategy and 80 with the GD strategy. The increase in FEV<sub>1</sub> from baseline was greater in the HD group than in the GD group, especially during the first month of treatment (304 ± 49 mL, versus 148 ± 39 mL, respectively, *P* = 0.01). Numbers of patients with completely or well controlled asthma were higher in the HD group than in the GD group (92.1% versus 81.1%, respectively, *P* = 0.03). Further, there was a significant difference between the groups with regard to frequency of acute exacerbations (9.2% in the HD group versus 21.3% in the GD group, *P* = 0.02); this effect was more pronounced for patients in the HD group with partially controlled or uncontrolled asthma.

**Conclusion:** Patients receiving HD therapy achieved asthma control more rapidly and maintained greater stability than those receiving GD therapy. This represents a novel strategy for gaining disease control in patients with uncontrolled asthma.

**Keywords:** asthma, treatment, inhaled corticosteroids, higher doses
